Health conditions studied**1****Description of health condition studied**

Bipolar Disorder

ICD-10 code

F31

ICD-10 code description

Bipolar disorder

Primary outcomes**1****Description**

sleep disorders. In this study, sleep disorders mean the score that the participants receive from answering questions 1 to 18.

Timepoint

before the start of intervention (pre-test), immediately after the end of the intervention(post - test) and one month after that(follow up)

Method of measurement

Sleep quality questionnaire of Petersburg et al

2**Description**

Suicidal thoughts: In the present study, suicidal thoughts mean the score that participants get from answering questions 1 to 19 of Beck et al.'s suicide thoughts questionnaire.

Timepoint

Before the start of the intervention (pre-test), immediately after the end of the intervention (post-test) and one month after that (follow-up)

Method of measurement

Beck et al.'s suicidal ideation questionnaire

3**Description**

Psychological flexibility: Psychological flexibility in the present study is the score that the participants get from

answering questions 1 to 20 of the psychological flexibility questionnaire of Dennis et al. (2010).

Timepoint

Before the start of the intervention (pre-test), immediately after the end of the intervention (post-test) and one month after that (follow-up)

Method of measurement

Psychological flexibility questionnaire of Dennis et al

4

Description

Fusion of thought-action: The meaning of fusion of thought-action in the present study is the score that the participants get from answering questions 1 to 19 of the questionnaire of fusion of thought-action by Rachman et al. (1988).

Timepoint

before the start of intervention (pre-test), immediately after the end of the intervention(post - test) and one month after that(follow up)

Method of measurement

Thought-action fusion questionnaire Rachman et al

5

Description

Bipolar disorder: Bipolar disorder in the present study is the score that the participants get from answering questions 1 to 11 of the Mania Yang et al. questionnaire (1978).

Timepoint

Before the start of the intervention (pre-test), immediately after the end of the intervention (post-test) and one month after that (follow-up)

Method of measurement

Yang et al.'s mania questionnaire

Secondary outcomes

empty

Intervention groups

1

Description

Intervention group: face-to-face intervention of mindfulness: first introduction and familiarization and explanation of the concept of automatic guidance: introduction of the program and a brief description of 8 sessions, familiarization of the group members with each other and the consultant, determination of group goals and rules, familiarization with the concepts of mindfulness training and the need for training Mindfulness, explanation about automatic guidance and raisin eating meditation, and then for 30 minutes, body check meditation and conscious breathing, assignment. Second, facing obstacles: reviewing the tasks of the previous session (doing body check meditation and discussing this experience), practice obstacles and Mindfulness program solutions for it and breathing mindfulness meditation practice, discussing the

difference between thoughts and feelings, doing sitting meditationAssignment. Third, awareness of breathing or conscious breathing: practicing seeing and hearing, sitting meditation and breathing with attention to bodily senses, discussing homework, three-minute breathing space practice, doing yoga exercises, assignment. Fourth, staying in the present. : Sitting meditation with attention to breathing, body sounds and thoughts (which is also called four-dimensional sitting meditation). Teaching how to stay in the present, assigning assignments. Fifth, permission/permission to attend (accepting thoughts and feelings): reviewing the assignment of the previous session, explaining the concept of acceptance, doing sitting meditation (awareness and presence of the mind from breathing, sounds, thoughts and feelings), presenting and performing yoga movements,Assignment. Sixth, thoughts are not facts: practice of three-minute breathing space, discussion of homework in pairs, presentation of an exercise entitled "creating thoughts, separate views" with this theme: the content of thoughts are mostly not real, use of poetry and metaphor and its connection with the quality of mindfulness, assignment. Seventh, how can I take care of myself in the best way? Sitting meditation and awareness of everything that comes into awareness in the moment. Presenting an exercise for making a list of pleasant and unpleasant life events, experiencing awareness and non-judgmental (non-selective) acceptance, assignment. 8. Acceptance and change (using what you have learned so far): body check meditation, three-minute breathing space exercise, discussion of Methods of coping with obstaclesMeditation, getting feedback from the participants and taking the post-test, preparing for the end of the sessions and the end of the intervention
