Investigating the effect of Motivational interviewing on the Attitude and Intention to childbearing of female healthcare personnel

Protocol summary

Study aim

Determining the effect of Motivational interviewing on the Attitude and Intention to childbearing of female healthcare personnel

Design

This study is a parallel randomized clinical trial in the form of pre-test, post-test and one-month follow-up, in which 56 eligible participants will be selected by random and purpose-based sampling and will be randomly assigned to two intervention and control groups.

Settings and conduct

The intervention in Feridounshahr health and treatment network will be held during 5 sessions of 45 minutes and in 5 consecutive weeks.

Participants/Inclusion and exclusion criteria

Inclusion criteria: Female healthcare personnel of reproductive age (15 to 49 years), Having informed consent to participate in the study, Being married, Having no children or having one or two children, Use of contraceptive methods, Not having primary or secondary infertility. Exclusion criteria: Participation in the relevant training course during the study, The presence of absolute contraindications for pregnancy, Suffering from mental illnesses, Using any tobacco and drugs and drinking alcohol, Occurrence of stressful events during the last 6 months.

Intervention groups

In the intervention group, counseling is done based on Motivational interview during 5 sessions of 45 minutes and weekly and online and they will also be provided with an educational pamphlet on childbearing. Also, the intervention group is invited to participate in the first and second session in person at Feridounshahr Health and Treatment Network. The control group will be given an educational pamphlet with the content of childbearing and its benefits, the consequences of delaying childbearing, and childbearing facilities according to the population youth law.

Main outcome variables

Change in mean scores of childbearing intention in reproductive age women

Randomized

Randomization description

Qualified personnel will be randomly selected in 2 health centers and 20 health houses under the central coverage of Fereydunshahr and 5 departments of Hazrat Rasool Akram Fereydunshahr hospital based on inclusion and exclusion criteria. Then, using the random numbers table and through the software (www.Random.org/sequences) with random assignment, the participants will be placed in two intervention and control groups. At the beginning of the study, participants are told that they have the same chance to be in the intervention or control group. Then, the people of the intervention group will be invited to participate in counseling sessions.
