

Clinical Trial Protocol

Iranian Registry of Clinical Trials

02 Jul 2026

Comparison the efficacy of newly designed hinged Ankle Foot Orthosis with solid Ankle Foot Orthosis on center of mass fluctuation in hemiplegic Cerebral Palsy patients

Protocol summary

Study aim

Comparison the efficacy of new articulated Ankle Foot Orthosis with solid Ankle Foot Orthosis on center of mass parameters in cerebral palsy hemiplegia

Design

Clinical trial without blinding and with the sample size of 25 people

Settings and conduct

3D-motion analysis was carried out on 10 meters walk away, and 3 one-way walking trials were performed under three conditions, bare foot, with subjects' own rigid AFOs and with the HP AFO. Two legs of each participant were tested separately and three successful trials were collected for each leg. To prevent fatigue between each trial, participants were asked to take 5 minute rest. changes in center of mass were calculated by employing the method of Cavana et al. In the current study, the mechanical energy was calculated based on the COM information measured and calculated from the 3D-motion analysis data.

Participants/Inclusion and exclusion criteria

We included Cerebral Palsy hemiplegia participants, who using solid Ankle Foot Orthosis, having ability to walk at independently with or without Ankle Foot Orthosis, with Gross Motion Functional Measurement (GMFM) between 1 to 2, with Plantar flexor spasticity between 1 to 2 according to Ashworth scale , having ability to perform 5 degree dorsiflexion actively or passively. People with cognitive problems, People with injection of botulism toxin in the latest 9 month, People with lower limbs fixed flexion contracture in lower limbs joints were excluded.

Intervention groups

New articulated Ankle Foot Orthosis

Main outcome variables

Mechanical energy including potential and kinetic energy, mechanical positive and negative work, joint power

Scientific title

Comparison the efficacy of newly designed hinged Ankle Foot Orthosis with solid Ankle Foot Orthosis on center of mass fluctuation in hemiplegic Cerebral Palsy patients

Public title

Efficacy of Ankle Foot Orthosis on center of mass

Purpose

Treatment

Inclusion/Exclusion criteria

Inclusion criteria:

Using solid Ankle Foot Orthosis Ability to walk at independently with or without Ankle Foot Orthosis Gross Motion Functional Measurement (GMFM) between 1 to 2 Plantar flexor spasticity between 1 to 2 according to Ashworth scale Ability to perform 5 degree dorsiflexion actively or passively

Exclusion criteria:

People with cognitive problems People with Botulism toxin injection in recent 9 month People with fixed contracture in lower limbs joints

Age

From **18 years** old to **55 years** old

Gender

Both

Phase

N/A

Groups that have been masked

No information

Sample size

Target sample size: **25**

Description of health condition studied

cerebral palsy

ICD-10 code

G80

ICD-10 code description

cerebral palsy

Primary outcomes

1

Description

Mechanical energy including potential and kinetic

Timepoint

Before and immediately after intervention

Method of measurement

Motion analysis and force plate

2

Description

Mechanical positive and negative work

Timepoint

Before and immediately after intervention

Method of measurement

Motion analysis and force plate

3

Description

joint power

Timepoint

Before and immediately after intervention

Method of measurement

Motion analysis and force plate

Secondary outcomes

1

Description

Joint power

Timepoint

Before and immediately after intervention

Method of measurement

Motion analysis and force plate

Intervention groups

1

Description

Intervention group: Hydro Pneumatic Ankle Foot Orthosis
