Clinical comparison between oral low dose of Naltrexon and standard medication in patients with Frontal Fibrosing Alopecia

Protocol summary

Study aim

Clinical comparison between oral low dose of Naltrexone and standard medication in patients with Frontal Fibrosing Alopecia referred to educational clinics of Isfahan University of Medical Sciences.

Design

The clinical trial includes two treatment groups with parallel groups, single blind, randomized, phase 2-3, on 30 patients, SPSS will use for randomization.

Settings and conduct

This study will conduct as a randomized clinical trial from the spring of 1401 to the end of 1403 in the dermatology clinic of Isfahan Al-Zahra Hospital and other clinics and teaching hospitals affiliated to Isfahan University of Medical Sciences.

Participants/Inclusion and exclusion criteria

Inclusion criteria: 1- New patients with FFA who have not received any medicine so far 2-Patients who have previously been treated with systemic drugs and have not received systemic drugs in the last one month. Based on clinical and trichoscopic criteria, their disease is active. 3-Patients who are treated with topical medicine and whose disease is still active based on clinical and trichoscopic criteria. Criteria for not entering the study: 1-Pregnancy or breastfeeding 2-History of hypersensitivity to Naltrexone drug 3- Addiction to opium or abuse of opioids 4- Personal or family history of breast cancer

Intervention groups

In this study, patients are divided into two groups. Group1 includes people who will treat with standard and common drugs (finasteride , minoxidil , Pimecrolimus, etc.). Group 2 includes people who will treat with Naltrexone.

Main outcome variables

Prefollicular scale; Interfollicular scale; Erythema; Decline in frontal and temple hair line

Scientific title

Clinical comparison between oral low dose of Naltrexon and standard medication in patients with Frontal Fibrosing Alopecia

Public title

Effects of Naltrexon in patients with Frontal Fibrosing Alopecia

Purpose

Treatment

Inclusion/Exclusion criteria

Inclusion criteria:

New patients without any other medications Active status of illness after leaving a systemic medication (at least a month) Active status of illness while the participants are using a topical medication

Exclusion criteria:

Age

From **18 years** old

Gender

Both

Phase

2-3

Groups that have been masked

- Participant

Sample size

Target sample size: **30**

Randomization (investigator's opinion)

Randomized

Randomization description

Randomization method: Simple; Randomization unit: Personal; Randomization tools: SPSS software; All the participants receive a number from 1 to 30. Then they share between two groups of Naltrexon/standard medication by a simple randomization method with SPSS

Blinding (investigator's opinion)

Single blinded

Blinding description

Patients are randomly assigned to one of the two groups of naltrexone treatment and standard treatment, but they do not know which group they are in. The design of study are described for patients.

Health conditions studied

1

Description of health condition studied

Frontal Fibrosing Alopecia

ICD-10 code

L66.9

ICD-10 code description

Cicatricial alopecia, unspecified

Primary outcomes

1

Description

Pre-follicular scale

Timepoint

Examinations is done at the beginning of the study and then 2, 4 and 6 months later.

Method of measurement

Using Dermoscope

2

Description

Erythema

Timepoint

Examinations is done at the beginning of the study and then 2, 4 and 6 months later.

Method of measurement

Observation

3

Description

Interfollicular scale

Timepoint

Examinations is done at the beginning of the study and then 2, 4 and 6 months later

Method of measurement

Using a dermoscope

4

Description

Decline in frontal and temple hair line

Timepoint

Examinations is done at the beginning of the study and then 2, 4 and 6 months later

Method of measurement

Using a ruler

Secondary outcomes

1

Description

ceasing the progression of disease

Timepoint

Examination is done at the beginning of the study and then 2, 4 and 6 months later.

Method of measurement

Frontal Fibrosing Alopecia Severity Index (FFASI)

Intervention groups

1

Description

Intervention group: Naltrexon

Category

Treatment - Drugs

2

Description

Intervention group: Standard medication

Category

Treatment - Drugs
