

Clinical Trial Protocol

Iranian Registry of Clinical Trials

16 Sep 2026

Effectiveness of acceptance based emotion regulation on diabetes control scale on type 2 diabetes.

Protocol summary

Study aim

1- Determining the effectiveness of acceptance-based emotion regulation group therapy on diabetes scale.

Design

present randomized clinical trial is semi-experimental and includes three stages: pre-test, post-test and follow-up with equivalent control groups. 60 people with type 2 diabetes were selected and randomly divided into three groups.

Settings and conduct

The study started with 60 patients who were divided into three intervention and control groups by random replacement method: Treatment sessions for each of the intervention groups were provided on two separate occasions so that the number of people in the groups was 10 people. Thus, there were 4 intervention groups in this research. Treatment sessions for people who were on the waiting list were held after the end of the follow-up. Also, the follow-up phase was implemented 6 months after the last group therapy session, and the group members completed the questionnaires of this phase and performed their blood sugar test.

Participants/Inclusion and exclusion criteria

inclusion: 1) diagnosis of type 2 diabetes by an endocrinologist and metabolism specialist, 2) age range of 35 to 65 years, 3) treatment under the supervision of a doctor with endocrine and metabolism expertise, 4) Having a medical record under the supervision of an endocrinology and metabolism specialist,

Intervention groups

Acceptance based emotion regulation Acceptance and commitment group Treatment as usual group

Main outcome variables

The outcome variables of the research are diabetes control scales, which include self-care, quality of life, and glycosylated hemoglobin(HbA1c).

Scientific title

Effectiveness of acceptance based emotion regulation on diabetes control scale on type 2 diabetes.

Public title
Psychotherapy on diabetes

Purpose
Health service research

Inclusion/Exclusion criteria
Inclusion criteria:
 Diagnosis if type 2 diabetes by endocrinologist Age between 35-65 Treatment under endocrinologist Medical report
Exclusion criteria:
 New drug treatment with the start of intervention Not suffering from other type of diabetes Sever psychiatric disorder Substance abuse disorder

Age
From **35 years** old to **65 years** old

Gender
Both

Phase
N/A

Groups that have been masked
No information

Sample size
 Target sample size: **60**
 Actual sample size reached: **50**

Randomization (investigator's opinion)
Randomized

Randomization description
 The randomization method of the current research is restricted randomization, and random allocation rule is used to select people in the intervention groups. At first, codes were assigned to all three groups, and then by lottery, the order of the groups was determined in order of acceptance based emotion regulation, acceptance and commitment, and the waiting list. In the next step, the code was assigned to the sample people. Then each code was drawn by lottery and assigned to the groups based on the order they were placed until the codes were finished. 20 people were in the acceptance based emotion regulation group, 20 people were in the acceptance and commitment group, and 20 people were in the waiting list.

Intervention groups

1

Description

Intervention group: The acceptance based emotion regulation The therapeutic intervention takes place during 14 sessions, and during these sessions, the role of emotions, their function, how to identify and properly express them, strategies for regulating unpleasant emotions and the role of values in giving meaning to life conditions are discussed. Each session is held once a week for 1:30. The people present in this intervention sit around each other in a room and the therapist, after introducing and teaching the points of the session, leads them to joint discussion and group exercises. The content of each session is prepared with the help of educational aids such as PowerPoint and session summaries and is provided to them.
