Effect of tai chi intervention for improving motor skills and executive function in older adults

Protocol summary

Study aim

This study aims to improve the motor skills and the executive functions like thinking reasoning , problem solving and memory of the older individuals using a specific form of exercises. tai chi exercises enhance self awareness and at the same time relaxes body and helps to gain a good balance , stability and aligned posture.it also shows potential to improve the cognitive functioning

Design

Randomized control trial, community based, single blind, allocated randomly through sealed envelope method into 2 groups.

Settings and conduct

The study will be conducted in the Al-Najat old home. • Participants will be included in the study after taking full informed consent. • Participants will be screened thoroughly for any exclusion, before getting enrolled. • Participants will be determined by the Single Leg Stance test to include in the study.

Participants/Inclusion and exclusion criteria

Inclusion criteria: 1) males and females of age 60 years and above. 2) individuals with Single leg stance score less than 20 seconds. Exclusion criteria: 1) color blind individuals. 2) visually impaired individuals. 3) bed bound individuals.

Intervention groups

The intervention group will be performing different tai chi moves for 6 consecutive weeks for a number of 5 days in a week, in which there will be a 10 min warm up session, 40 mins exercise session and 10 mins of cool down session.

Main outcome variables

Executive function and motor skills

- Participant

Sample size

Target sample size: **77**

Randomization (investigator's opinion)

Randomized

Randomization description

Random assignment using the sealed envelope method will use. According to the sample size, 70 sheets of aluminum paper will be cut properly. This paper will be double the size of the paper. 35 sheets of carbon paper cut into appropriate sizes according to the paper used. A standard-sized square paper will take and mark with (the Tai chi group). In this way, 35 papers will mark with (Control group). The sheet of paper on which either the tai chi group or the control group will mention will then be folded to fit in the envelope. A sheet of carbon paper will place on top of the folded paper and mark either the tai chi group or the control group facing the envelope, then the sheet of aluminum foil will be wrapped on the carbon paper(with folded paper inside). All the above-prepared papers will place in the envelope (which will utterly opaque) the envelope will then be sealed. in this way, 35 envelopes for the tai chi group and 35 envelopes for the control group will prepare with a total number of 70. These envelopes will then thoroughly shuffle like a deck of cards. The envelopes will then mark with numbers 1-70. Each participant picks the envelope in order from 1-70 and will be allotted to the group(tai chi group or control group) accordingly.

Blinding (investigator's opinion)

Single blinded

Blinding description

Only the researcher doing the study knows which treatment or intervention the participant is receiving until the intervention is complete. It makes results less likely to be biased. For that, People receiving treatment will engage to the same extent, also, therapist who will deliver treatment do so with the same effort and enthusiasm, regardless of whether they are delivering treatment or a control.

Health conditions studied**1****Description of health condition studied**

Old age

ICD-10 code

R54

ICD-10 code description

Age-related physical debility

Primary outcomes**1****Description**

Motor skills and executive functions

Timepoint

Before intervention and 6 weeks after intervention.

Method of measurement

Time up and go test, stroop test, trail making test.

Secondary outcomes**1****Description**

Balance, activities of daily living

Timepoint

Baseline and after intervention

Method of measurement

Single leg stance test, barthel index

Intervention groups

1

Description

Intervention group: For this group, a series of tai chi exercises will be carried out in smooth pattern. Doing Tai chi exercises in a specific pattern will improve individuals ability to perform coordinated activities, body awareness, mental focus and flexibility. Each training session consist of a 10-minute warm-up, 40 minutes practicing basic Tai Chi forms, and a 10-minute cool-down. These session will last for 6 consecutive weeks for a number of 5 days per week.

Category

Rehabilitation

2

Description

Control group: this group will receive a basic protocol of 60 minutes involving 10 minutes warms up 10 minutes of static stretching of major muscle groups , 40 minute aerobic exercises and 10 minutes cool down. These sessions will be given for 6 weeks consecutively for 5 days per week.
