

Clinical Trial Protocol

Iranian Registry of Clinical Trials

30 Jul 2026

Investigating the effect of using botulinum toxin A in emotional movements of the nostrils in patients undergone rhinoplasty.

Protocol summary

Study aim

To determine the effect of using botulinum toxin A to prevent changes caused by emotional movements of the nostrils in patients who have undergone rhinoplasty.

Design

Clinical trial with control group with parallel groups, without blinding, randomized and phase 3 on 60 patients. The table of random numbers will be used for randomization.

Settings and conduct

This clinical trial study will be conducted in 1402 in Al-Zahra Hospital on patients who have had a history of rhinoplasty, and these patients will be injected with 100 units of botulinum toxin around the muscles of the nasal lobes. Blinding was not done in this study.

Participants/Inclusion and exclusion criteria

This study is carried out on the population of patients who had the inclusion conditions including a history of rhinoplasty and informed consent. Exclusion criteria: psychological disease or history of anticoagulant treatment.

Intervention groups

The intervention performed in the intervention group is the injection of 100 units or 2.5 ml of botulinum toxin A manufactured in MASON pharmacological company to the muscles around the nostrils in one session after rhinoplasty surgery, and no injection is performed in the control group.

Main outcome variables

emotional movements of nostrils

Scientific title

Investigating the effect of using botulinum toxin A in emotional movements of the nostrils in patients undergone rhinoplasty.

Public title

botulinum toxin A in emotional movements of the nostrils

Purpose

Treatment

Inclusion/Exclusion criteria

Inclusion criteria:

history of rhinoplasty age between 18 and 65 informed consent

Exclusion criteria:
history of psychiatric disorders using anticoagulants
history of same area botox in past 6 months pregnancy and breastfeeding

Age

From **18 years** old to **65 years** old

Gender

Both

Phase

3

Groups that have been masked

No information

Sample size

Target sample size: **60**

Randomization (investigator's opinion)

Randomized

Randomization description

To generate random numbers, a table of random numbers was used, and the researcher places his finger on a number and then moves up and to the left. Based on the sample size, a number of envelopes with aluminum wrappers, prepared and each of the randomly generated sequences are written on a card and the cards are placed inside the envelopes in order. To maintain a random sequence, the outer surface of the envelopes is numbered in the same order. Finally, the lid of the envelopes is glued and placed in a box. Then, according to the order of entry of the participants in the study, an envelope is opened and a random sequence is determined. If the number inside the envelope is odd, the patient will be placed in the first group, and if it is even, the patient will be placed in the second group.

Blinding (investigator's opinion)

Not blinded

Encounter for other plastic and reconstructive surgery
following medical procedure or healed injury

Primary outcomes

1

Description

emotional movements of nostrils

Timepoint

before the botox injection and 1 week and 1 month after
injection

Method of measurement

FACE questionnaire

Secondary outcomes

empty

Intervention groups

1

Description

Intervention group: injection of 100 units equivalent to
2.5 ml of botulinum toxin A manufactured in MASON
pharmacological company into the muscles of the
nostrils in one session after rhinoplasty. This work is
done with the help of a 30 gauge needle in the Depressor
septi nasi and Levator labii superior alaeque nasi
muscles. the botox manufactured in MASON
pharmacological company.
