Evaluation of efficacy of subendometrial PRP injection for FET cycle of RIF patients

Protocol summary

Study aim

Evaluation the efficacy of subendometrial PRP injection on implantation

Design

Randomized double blind clinical trial, with 30 patients who are allocated in each parallel group, This is phase 3 trial that patient and physician (who is different from surgeon that perform procedure) will evaluate the outcome will be blinded regarding groups.

Settings and conduct

This randomized blinded clinical trial will be conducted in case(hysteroscopy crushing endometrium, PRP) and control (hysteroscopy crushing endometrium) groups at IVF clinic of YAS hospital.

Participants/Inclusion and exclusion criteria

History of recurrent implantation failure Having good quality embryo No uterine anomaly

Intervention groups

For 30 patients with history of recurrent implantation failure will be included in the randomized blinded clinical trial for PRP injection to four points at anterior and posterior and lateral wall of subendometrial uterine cavity during luteal phase hysteroscopy and crushing endometrium.

Main outcome variables

Chemical pregnancy, clinical pregnancy

Inclusion/Exclusion criteria

Inclusion criteria:

RIF patients Have good quality embryo Having signed

informed consent Age 20-40 years Exclusion criteria: Severe male infertility BMI>30 Uncontrolled hypothyroidism User of corticosteroids User of glucose control agents CNS tumour Uterine malformation Cavity distorting lesions Severe endometriosis Liver disease Asherman syndrome Age From 20 years old to 40 years old Gender Female Phase 2-3 Groups that have been masked • Participant • Care provider Sample size Target sample size: 60 Randomization (investigator's opinion) Randomized Randomization description Randomization rule: First 30 letters A and 30 letters B are written on special papers that are not marked inside. Then all of them are placed in a bag and for each patient, after obtaining informed consent, a paper is removed randomly and without replacement, and based on the letter written on it, the desired intervention is performed for the patients. In addition, interventions A (case group : hysteroscopycrushingendometrium, subendometrial PRP injection) or B (control group: hysteroscopy crushing endometrium) are determined by a lot. Blinding (investigator's opinion) Double blinded Blinding description Patient and physician (she in not the same person that perform procedure)who evaluate the outcome are blinded regarding control(hysteroscopy crushing endometrium) or case (hysteroscopy crushing endometrium, PRP) groups.
