

Clinical Trial Protocol

Iranian Registry of Clinical Trials

16 Sep 2026

The effect of Extensor Digiti Minimi Tendon (EDM) transfer on Ulnar Deviation of the Little Finger in patients with ulnar nerve injury

Protocol summary

Study aim

Correction of ulnar deviation in patients with ulnar nerve injury by transferring the extensor digiti minimi tendon and then checking the amount of correction of the angle between the fifth and fourth finger by measuring the angle with a protractor

Design

A clinical trial without a control group and without blinding that is performed on 15 patients.

Settings and conduct

Patients with ulnar nerve injury rarely come to correct the deviation of the fifth finger, and this interventional surgery is performed very rarely. All surgeries are performed at Hazrat Fatemeh Zahra Hospital, affiliated to Iran University of Medical Sciences, by a professor of plastic surgery. The extensor digiti minime tendon will be separated from the fifth metacarpophalangeal joint and moved from the fifth compartment of the extensor to the fourth compartment and sutured on the radial side of the fifth metacarpophalangeal joint in the position of correcting the deviation of the fifth finger.

Participants/Inclusion and exclusion criteria

Patients with a previous history of ulnar nerve injury of the hand, who have deviation of the fifth finger due to the weakness of the hypothenar muscles, and have a desire to correct the deviation of the fifth finger.

Intervention groups

Transferring the extensor digiti minimi tendon from the fifth finger and moving that from it's extensor compartment.

Main outcome variables

The degree of correction of deviation of the fifth finger

Scientific title

The effect of Extensor Digiti Minimi Tendon (EDM) transfer on Ulnar Deviation of the Little Finger in patients with ulnar nerve injury

Public title

The effect of Extensor Digiti Minimi Tendon (EDM)

transfer on Ulnar Deviation of the Little Finger

Purpose
Treatment

Inclusion/Exclusion criteria
Inclusion criteria:
 Patients with a history of ulnar nerve injury and deviation of the fifth finger as a result Willingness of the patient to participate in the study
Exclusion criteria:
 Age less than 10 years old The patient's unwillingness to participate in the study

Age
From **10 years** old

Gender
Both

Phase
N/A

Groups that have been masked
No information

Sample size
Target sample size: **15**

Description of health condition studied

Wartenberg`s sign

ICD-10 code

G56.2

ICD-10 code description

Lesion of ulnar nerve

Primary outcomes

1

Description

The amount of fifth finger deviation correction

Timepoint

Measuring the deviation angle of the fifth finger before the intervention and 3 months after the intervention

Method of measurement

goniometer

Secondary outcomes

empty

Intervention groups

1

Description

Intervention group: performing surgery to transfer the extensor tendon of digital mini-me and move its extensor compartment from 5 to 4 and re-stitch the tendon to correct the fifth deviation, which is performed by a plastic surgeon professor. The patient will wear an extensor brace for three weeks and then be referred for 2 months of physical therapy. Three months after the surgery, the degree of angle change and correction of the deviation of the fifth finger will be measured with a goniometer.
