The quality of Care and Attitude Change of Nursing Students at Shiraz University of Medical Sciences towards Old age: Using Parts of Classical Persian Literature: An RCT

Protocol summary

Study aim

Improving the quality of care and changing the attitude of undergraduate nursing students of Shiraz University of Medical Sciences towards old age by using parts of Persian classical literature teachings.

Design

86 of the nursing students of Shiraz University of Medical Sciences eligible to enter the study were randomly selected and the students were randomly assigned to groups with the help of statistical software (2 intervention and control groups) with Efron's randomization algorithm with equal blocks and 500 rotations. chance) in the control and intervention groups using NCCS-PASS version 15 software.

Settings and conduct

In Shiraz nursing school, 43 students will be trained in each session, in order to collect data and measure the research variables of the effect of the intervention on the desired outcomes by means of the Kogan attitude questionnaire towards the elderly and measuring the quality of nursing care in 4 time periods before the intervention and after the end of the session. Third, after the end of the intervention and two weeks after the end of the intervention, it will be completed for the participants.

Participants/Inclusion and exclusion criteria

1. Applying for the course unit "Adult and Aging Internship in Nursing", 2. Being Bachelor of Nursing at SUMS. Excluding: 1. Exchange Student

Intervention groups

intervention group and control group. Students' academic semesters are assigned to groups in a simple random way. One of the groups (semester 7 and 8) is control and the other is intervention.

Main outcome variables

Improving the quality of nursing care (in physical, mental and communication dimensions), changing the attitude

of nursing students towards the elderly

Sample size

Target sample size: **86**

Randomization (investigator's opinion)

Randomized

Randomization description

The names of nursing students who have taken Geriatric Nursing Internship course will received from the Vice-Chancellor of Education; Then, according to the inclusion and exclusion criteria in the random numbers table in Excel software, randomization is done by defining 2 codes of A & B (for two groups: intervention and control). Every student has an equal proportion to being in each group.

Blinding (investigator's opinion)

Single blinded

Blinding description

Blinding occurs in the outcome assessor in such a way that she does not know which data are related to the control group and which are related to the intervention group.

Intervention groups

1

Description

Intervention group: 43 students will be trained in each session, and after explaining the goals of the project and obtaining consent to participate in the study, questionnaires will be used to collect data and measure research variables. In order to measure the effect of the intervention, the desired outcomes will be completed by the Kogan Attitude towards the Elderly Questionnaire and measuring the quality of nursing care in 4 time periods before the intervention, after the end of the third training session, after the end of the intervention and two weeks after the end of the intervention for the participants. became. At first, the desired questionnaires will be delivered to the participants in the research for completion, then 6 training sessions of 45 minutes will be held during 2 months with the aim of increasing students' knowledge about the elderly by using parts of classical literature teachings. An evaluation will be done at the end of the third training session with the aim of evaluating the training and measuring the quality of the intervention, and in two other time periods (the end of the intervention and two weeks after the end of the intervention) with the aim of lasting the effect of the educational program.
