

Clinical Trial Protocol

Iranian Registry of Clinical Trials

22 Jun 2026

Investigating and comparing the effect of brain training and balance training on the static and dynamic balance of the elderly individuals in nursing homes

Protocol summary

Study aim

Investigating and comparing the effects of brain exercises and balance exercises on the static and dynamic balance of elderly individuals in nursing homes

Design

This study is a clinical trial, without a control group, employing parallel groups, utilizing a blind strain, and employing an available sampling method, the sample size consist of 50 elderly individuals.

Settings and conduct

This study is conducted as a blind trial, meaning that the evaluator who assesses the study's outcomes and the results of both groups remains unaware of the group assignments. The study takes place in the physiotherapy department of the nursing home. Each group undergoes 12 sessions of 30 minutes. 1. The first group engages in balance exercises: Standing exercises, transfer exercises, walking exercises, functional strength exercises 2. The second group engages in brain exercises: lateralization; cross crawl, lazy eight, elephant, double doddle focalization; owl, lively arm, gravity glider, rocker centralization; brain button, earth button, balance button, space button, thinking cap

Participants/Inclusion and exclusion criteria

Elderly individuals aged 60 and above, residing in a nursing home, who are physically independent without any kind of disability according to ICF criteria; have not undergone surgery on the lower limbs and spine, and have no history of neurological diseases; do not have severe vision or hearing problems; and have given informed consent to participate in the study.

Intervention groups

1. The first group of balance exercises includes; standing exercises, transition exercises, walking exercises, functional strength exercises. 2. The second group of brain exercises includes; lateralization, focalization, concentration

Main outcome variables

Static Balance; Dynamic Balance

Purpose
Prevention

Inclusion/Exclusion criteria

Inclusion criteria:

Age over 60 years Ability to walk at least 9 meters without the assistance of another person or a cane Not engagement in regular exercise during the past year No physical disabilities of any kind (as per the World Health Organization's ICF definition of disability and based on medical opinions in the elderly file) No history of neurological disease including Parkinson's, Stroke and Multiple Sclerosis Absence of severe muscle and joint pain as per the doctor's opinion No dizziness and ability to cooperate during the research according to the doctor No history of surgery in the lower limbs and spine The absence of severe vision problems and significant hearing problems Informed consent to participate in the study

Exclusion criteria:

Withdrawal and dissatisfaction of participants from the research for any reason Physical injuries during the research Performing surgery on the lower limbs and spine Lack of informed consent to continue participating in any phase of the research

Age
From **60 years** old

Primary outcomes

1

Description

Static balance

Timepoint

Static balance measurement is conducted at the beginning of the study (prior to the initiation of the intervention) and 30 days after the commencement of the exercise

Method of measurement

Single leg stance test

2

Description

Dynamic balance

Timepoint

Dynamic balance measurements at the beginning of the study (prior to the initiation of the intervention) and 30 days after the commencement of the exercise

Method of measurement

Time up and go test

Secondary outcomes

empty

Intervention groups

1

Description

First intervention group: balance exercises; 1. standing exercises 2. transitional exercises 3. walking exercises 4. functional strength exercises. twelve sessions of 30 minutes each.

Category

Rehabilitation

2

Description

The second intervention group: brain exercises; including; 1. lateralization: cross crawl, eight lazy, elephant, double duddle 2. focalization: owl, lively arm, gravity glider, rocker 3. centralization: brain button, earth button, balance button, space button, thinking cap. twelve sessions of 30 minutes each.
