The effectiveness of emotional schema therapy on feeling of anhedonia and psychological distress of women with domestic violence experience

Protocol summary

Study aim
Determining the effectiveness of emotional schema therapy on feelings of joylessness and psychological distress in women with domestic violence experience.

Design
The clinical trial with an experimental group and a control group, single blind, sample size of 30 people, randomized, phase 2, lottery method was used for randomization.

Settings and conduct
Study location: Parse Counseling Center was in Robat Karim. The study population: all women with domestic violence experience who had referred to counseling and welfare centers in the southwest of Tehran province in 2021; One-sided blinding type; Blinding method: Those involved in the study (participants) assumed that all participants would receive the intervention, even if some did not.

Participants/Inclusion and exclusion criteria
Inclusion criteria: married women who are victims of one of the types of domestic violence as diagnosed by a forensic doctor, age range between 20 and 50 years, having literacy, ability to participate in meetings, willingness and informed consent to participate in the research. Non-inclusion criteria: suffering from an acute mental disorder, having obvious physical or psychological symptoms, taking psychiatric drugs and having substance abuse at the time of the research, simultaneous participation in other psychotherapy sessions.

Intervention groups
Intervention group: Emotional schema therapy; Emotional schema therapy training sessions of 12 90-minute sessions based on Leahy's training package (2016) were conducted individually on the experimental group. Control group: No intervention was done for the control group.

Main outcome variables
Anhedonia; psychological distress

Scientific title

The effectiveness of emotional schema therapy on feeling of anhedonia and psychological distress of women with domestic violence experience

Public title
The effectiveness of emotional schema therapy on women with domestic violence experience
Purpose
Education/Guidance
Inclusion/Exclusion criteria
Inclusion criteria:
Married women who are the victims of one types of domestic violence as diagnosed by forensic medicine Age range between 20 and 50 years Being literate Ability to participate in meetings Willingness and informed consent to participate in the research
Exclusion criteria:
Suffering from an acute psychiatric and physical illness at the time of the research The existence of cognitive disorders and weakness in cognitive function Taking psychiatric drugs and having substance abuse at the time of the study Simultaneous participation in other psychotherapy sessions
Age
From **20 years** old to **50 years** old
Gender
Female

Phase
3
Groups that have been masked

- Participant

Sample size
Target sample size: **30**
Actual sample size reached: **29**
Randomization (investigator's opinion)
Randomized
Randomization description
The method of random assignment to the intervention and control groups was to place 30 cards in a box with the letters of the English alphabet "M" and "C" equally written on them. Each patient randomly selected a card and entered the intervention or control group according to the letter written on the card.
Blinding (investigator's opinion)
Single blinded
Blinding description
Those involved in the study (participants) assumed that all participants received the intervention, although some did not.
Placebo

Health conditions studied

1

Description of health condition studied
Anhedonia-psychological distress
ICD-10 code
F32
ICD-10 code description
Major depressive disorder, single episode

Primary outcomes

1

Description
Anhedonia score in Snaith-Hamilton's hedonic questionnaire (1995)
Timepoint
At the beginning of the study (before the start of the intervention) and after the treatment protocol
Method of measurement
Snaith-Hamilton's hedonic questionnaire (1995)

2

Description
Psychological distress score in Kessler's Psychological Prescience Questionnaire (2002)
Timepoint
At the beginning of the study (before the start of the intervention) and after the treatment protocol
Method of measurement
Kessler's Psychological Prescience Questionnaire (2002)

Secondary outcomes

empty

Intervention groups

1

Description
Intervention group: In this research, the experimental group received 12 sessions of 90-minute emotional schema therapy, based on Leahy's educational package (2016), individually.
Category
Other

2

Description
Control group: It did not receive any intervention.

Title and more details about the data/document
The data related to this research is available as an Excel file without mentioning identity information.

When the data will become available and for how long
After publishing the results.

To whom data/document is available
It will be available for researchers working in academic and scientific institutions.

Under which criteria data/document could be used
There are no special conditions.

From where data/document is obtainable
Responsible author: Mansour Ali Mahdi Assistant Professor of Psychology, Islamic Azad University, Tehran Medical Sciences Unit, Tehran, Iran. Phone: 7-22006660, Address: Shariati St., Shahid Mosivand St., intersection of Karimi St., Tehran Islamic Azad University of Medical Sciences Building, Postal Code: 1916893813, Email:alimehdi.mansoor@gmail.com

What processes are involved for a request to access data/document
Documents or files will be provided as soon as possible after contacting the responsible author.
