The combined effect of apple vinegar and honey on blood lipids in patient with hyperlipidemia

Protocol summary

Summary

This study aim to investigating the effect of apple vinegar and honey combination on lowering the level of blood lipids and comparing its effect with the lipid - lowering drugs like Atorvastatin and Gemfibrozil. To this aim, the subjects of the study will be selected base on inclusion criteria and using convenience sampling and randomly divided into two groups of intervention and control after obtaining permission from the university and acquiring the participants' informed consents. The study sample consists of 60 patients with increase levels of blood lipids(cholesterol, TG, LDL, HDL). For subsequent investigations, levels of blood lipids are measure at the beginning and 4 weeks after the intervention in both groups . The participants in the control group only receive their usual medication during this 4-week period, while those in the intervention group will be administered one tablespoon of honey and apple vinegar in a glass containing 200cc water twice a day in addition to their usual lipid-lowering drugs. After 4 weeks, levels of blood lipids are measure in both groups.
