

Clinical Trial Protocol

Iranian Registry of Clinical Trials

27 May 2026

Effect of oral and intravenous Tranexamic Acid for preventing postpartum hemorrhage after cesarean delivery

Protocol summary

Study aim

Effect of oral and intravenous Tranexamic Acid for preventing postpartum hemorrhage after cesarean delivery

Design

A clinical trial with the control group, randomized, single-center trial, Sample size of 100 people.

Settings and conduct

Amir Al-Momenin Hospital

Participants/Inclusion and exclusion criteria

Inclusion criteria: Age between 18 and 40 years; Candidate for a non-emergency cesarean section; A singleton pregnancy with a gestational age between 38 and 39 weeks that has been confirmed by ultrasound. Exclusion Criteria: Preeclampsia, premature birth, prolonged rupture of the water sac, multiple births; Visualization of fetal anomalies by ultrasound; Previous history of systemic diseases.

Intervention groups

Intervention group: In this group, according to the protocol, the infusion of one gram of tranexamic acid (two 500 mg TRANEXIP® ampoules manufactured by Caspian Pharmaceutical Company, Iran) in 200 ml of normal saline serum will be done within 10 minutes before on start the operation. Control group: In this group, according to the protocol, 2 grams of oral tranexamic acid (8 capsules of 250 mg TRANCID® manufactured by Amin Pharmaceutical Company of Iran) will be given to the patient one hour before the operation.

Main outcome variables

Blood pressure; Postpartum bleeding volume.

Sample size

Target sample size: **100**

Randomization (investigator's opinion)

Randomized

Randomization description

Block randomization; Individual; Random Number Tables. Randomized permutation blocks (block 2). Using Excel software to generate random number tables

Blinding (investigator's opinion)

Single blinded

Blinding description

The patient and the midwife who distributes the drugs among the patients will be unaware of the prescribed drug for each patient

Placebo

Not used

Health conditions studied

1

Description of health condition studied

Hemorrhage after cesarean delivery

ICD-10 code

O34.21

ICD-10 code description

Maternal care for scar from previous cesarean delivery

Primary outcomes

1

Description

Blood pressure

Timepoint

Before the start of cesarean section and 2 hours after surgery

Method of measurement

Heart monitor device

2

Description

Postpartum bleeding volume

Timepoint

The difference in the weight of sheets, gauze and long gauze used during surgery and up to 2 hours after surgery

Method of measurement

"Mahek" brand digital scale (made in Iran with an accuracy of 0.1 gr)

Secondary outcomes

empty

Intervention groups

1

Description

Intervention group: In this group, according to the protocol, the infusion of one gram of tranexamic acid (two 500 mg TRANEXIP® ampoules manufactured by Caspian Pharmaceutical Company, Iran) in 200 ml of normal saline serum will be done within 10 minutes before on start the operation.
