Comparing the Effect of Two Methods of Corrective Movements, Janda's and Saharman's Approaches, in Correcting Lower Crossed Syndrome and Muscle Performance in Non- Athlete females aged 18 to 30.

Protocol summary

Study aim

Comparing the Effect of Two Methods of Corrective Movements, Janda's and Saharman's Approaches, in Correcting Lower Crossed Syndrome and Muscle Performance in Non- Athlete females aged 18 to 30.

Design

A clinical trial with a control group, with parallel groups, without blinding, randomized with the rand function of Excel software, on 75 subjects.

Settings and conduct

After the visual assessment of the students in Shahrekord University dormitories, the dormitory prayer room will be used to continue the evaluation of the subjects. Then the Qualified and volunteer people will be randomly placed in three groups (Two intervention groups and one control group). The intervention groups will do their exercises for eight weeks, three sessions a week and assessment will repeat after eight weeks.

Participants/Inclusion and exclusion criteria

- Inclusion criteria: Age range 18 to 30 years Voluntary participation and submission of consent Having lumbar lordosis greater than 54 degrees Having anterior pelvic tilt - Exclusion criteria: Having a history of regular exercise Taking certain medications Having surgery in the lumbar and pelvic region The presence of any type of injury in the lower limb during the last six months

Intervention groups

Two intervention groups including corrective exercise groups with Janda's approach and corrective exercise with Sohrman's approach and a control group

Main outcome variables

lordosis angle anterior pelvic tilt

Scientific title

Comparing the Effect of Two Methods of Corrective

Movements, Janda's and Saharman's Approaches, in Correcting Lower Crossed Syndrome and Muscle Performance in Non- Athlete females aged 18 to 30.

Public title

Comparing the Effect of Two Methods of Corrective Movements, Janda's and Saharman's Approaches, in Correcting Lower Crossed Syndrome in Non- Athlete females

Purpose

Treatment

Inclusion/Exclusion criteria

Inclusion criteria:

Age range from 18 to 30 years Voluntary participation and providing consent Having a lumbar lordosis greater than 54 degrees Having an anterior tilt of the pelvis Not having a history of regular exercise Not taking special drugs Not having surgery in the lumbar and pelvic area Not having any Abnormality in the lower limb The absence of any type of injury in the lower limb during the last six months

Exclusion criteria:

Any possible injury during exercises Two consecutive absent sessions Absence of more than 3 training sessions Unwillingness to continue cooperation Exacerbation of abnormality and doctor's diagnosis to withdraw from the study

Age

From **18 years** old to **30 years** old

Gender

Female

Phase

N/A

Groups that have been masked

Sample size

Target sample size: **75**

Randomization (investigator's opinion)

Randomized

Randomization description

Randomization method: Block randomization In this study, people with lower crossed syndrome in Shahrekord University girls' dormitories by one block randomization assigned to one of the three treatment groups and receive the intervention related to the same group. Randomization Unit: Individual Randomization tool: Lottery using cards and bowls How to make a random sequence and concealment: First, the names of 60 students with lower crossed syndrome were written on a sheet as a statistical population, and the names were folded and thrown into a bowl to hide them. Two unrelated people were asked to choose 20 cards each, leaving 20 cards in the bowl. The 20 names selected by the first person were chosen as Janda's corrective exercises group, the 20 names selected by the second person were selected as Saharman's corrective exercises group, and the remaining 20 names in the bowl were selected as the control group.

Health conditions studied

1

Description of health condition studied

Lower Crossed Syndrome

ICD-10 code

13

ICD-10 code description

Diseases of the musculoskeletal system and connective tissue

Primary outcomes

1

Description

Lordosis angle

Timepoint

Pre-test and post-test

Method of measurement

Flexible ruler

2

Description

hip tilt

Timepoint

Pre-test and post-test

Method of measurement

tilt meter

Secondary outcomes

1

Description

Measurement of muscle function

Timepoint

Pre-test - post-test

Method of measurement

goniometer- Chronometer

Intervention groups

1

Description

Intervention group: corrective exercise with Janda's approach, It includes sensory-motor exercises, without special equipment, for eight weeks and three sessions per week.

Category

Rehabilitation

2

Description

Intervention group:corrective exercise with Saharman's Approaches, It includes stretching and strengthening exercises, without special equipment, for eight weeks and three sessions per week.

Category

Rehabilitation

3

Description

Control group: perform their usual daily activities.

Category

Rehabilitation
