The Influence of Sport, Cognitive and Music rehabilitation on Depression, Balance, Quality of Life, attention and working memory in male schizophrenic

Protocol summary

Study aim

Determining the effect of cognitive, sports and music interventions on improving depression and balance in male schizophrenic patients

Design

The current research was a semi-experimental type with a pre-test and post-test design, which was implemented with seven groups

Settings and conduct

The current research was a semi-experimental type with a pre-test and post-test design, which was implemented with seven groups. The statistical population of the research was male schizophrenic patients referred to the Urmia Psychiatric Center, and the statistics of these patients in the period of 2 months was 263. 60 schizophrenic patients with an average age of 39.12 ± 8.90 were selected as samples from the target statistical population and randomly divided into 7 groups of 12 including 1) aerobic exercise group 2) cognitive rehabilitation group 3) Music group 4) Aerobic training + cognitive rehabilitation group 5) Aerobic training + music group 6) Cognitive rehabilitation + music group 7) Aerobic training + cognitive rehabilitation + music group were divided.

Participants/Inclusion and exclusion criteria

The ability to understand and speak. presence of dementia(MMSE score >25 Get a score of 11 or above on the Beck Depression Inventory,

Intervention groups

1) Aerobic exercise group 2) Cognitive rehabilitation group 3) Music group 4) Aerobic exercise group + cognitive rehabilitation 5) Aerobic exercise group + music 6) Cognitive rehabilitation + music group 7) Aerobic exercise group + cognitive rehabilitation + music

Main outcome variables

depression balance Quality of Life attention, working

memory

Health conditions studied**1****Description of health condition studied**

schizophrenia

ICD-10 code

F20

ICD-10 code description

Schizophrenia

Primary outcomes**1****Description**

Depression score using Beck depression questionnaire

Timepoint

Before and after the intervention

Method of measurement

Beck questionnaire

2**Description**

Dynamic balance

Timepoint

Before and after the intervention

Method of measurement

timed up and Go Test (TUG)

3**Description**

Schizophrenia Quality of Life Scale Revision 4

Timepoint

Before and after the intervention

Method of measurement

This scale , created it to measure HRQOL in individuals diagnosed with schizophrenia. Incorporated in two domains, psychosocial feelings (22 items) and cognition and vitality (11 items)

4**Description**

Continuous Performance Test (CPT)

Timepoint

Before and after the intervention

Method of measurement

The CPT, is a psychological test used to assess a person's sustained attention, attention deficits and vigilance. It typically involves a computer-based task where the participant is required to respond to specific stimuli while ignoring distractors or non-target stimuli

5

Description

N-back test

Timepoint

Before and after the intervention

Method of measurement

During the n-back test, a visual stimulus is presented on the screen in the form of a randomly appearing sequence of numbers. It is necessary for the subject to verify if the stimulus currently being presented corresponds to the stimulus from the previous phase or not

Secondary outcomes

empty
