The effect of mindfulness-based cognitive-behavioral therapy on fertility attitude in single-child working women

Protocol summary

Study aim

The effect of mindfulness-based cognitive behavioral therapy on childbearing attitudes in single-child working women

Design

The clinical trial has a randomized control group, an intervention and a control group of 36 people each, randomization by 4 blocks method.

Settings and conduct

The place of the study is the health center in the east of Ahvaz city. The sample of the research is working women with one child referring to the health center who meet the conditions to entering the study. The participants are randomly assigned to two control and intervention groups. In the control group, there is no intervention, and in the intervention group, the method of cognitive behavioral therapy based on mindfulness (MBCT) is used. The treatment program will be provided by the researcher in the form of an 8-session program over 8 weeks. Meetings will be held in groups. Contents and assignments will be presented to the intervention group on a weekly basis. The way to follow up the samples in 3 stages is to fill the questionnaire in the first session (pre-test), the last session (post-test) and one month after the last training session.

Participants/Inclusion and exclusion criteria

Entry conditions: being married; being between the ages of 18 and 44 years old 3; reading and writing literacy; working women; single-child women. Conditions for non-entry: having a child with a disability; secondary infertility of a woman or her husband; having a serious physical illness that prevents fertility.

Intervention groups

Participants are randomly assigned to two control and intervention groups. In the control group, there is no intervention, and in the intervention group, the method of mindfulness based cognitive behavioral therapy (MBCT) is used.

Main outcome variables

Childbearing attitude

Scientific title	The effect of mindfulness-based cognitive-behavioral therapy on fertility attitude in single-child working women
Public title	The effect of mindfulness-based cognitive-behavioral therapy on fertility attitude's women
Purpose	Education/Guidance
Inclusion/Exclusion criteria	Inclusion criteria: Being married Single-child women Literacy for reading and writing Having the age of 18 to 44 years Employment of women Low score based on attitude towards Childbearing questionnaire: less than 11 Exclusion criteria: Secondary infertility of wife or husband Having mental disorders in a woman or her husband Having a serious physical illness that prevents fertility Husband's activity in jobs that require periodic migration. Having a child with a disability
Age	From 18 years old to 44 years old
Gender	Female
Phase	N/A
Groups that have been masked	No information
Sample size	Target sample size: 72
Randomization (investigator's opinion)	Randomized
Randomization description	For random allocation, considering that we have two intervention and control groups, we will use a block of 4. In order to determine the allocation sequence using the 4 block method, random allocation sequence generation software will be used. In order to hide the sequence of allocation, the papers identifying the group of people are placed inside the envelopes in the opaque package and coded in the same order.
Blinding (investigator's opinion)	Not blinded
Blinding description	
Placebo	Not used
Assignment	Parallel
Other design features	
Secondary Ids	empty

Description	Fertility Attitude Score in Fertility Attitude Questionnaire
Timepoint	The beginning of the study (pre-test), the end of the study (post-test), 1 month after the last session.
Method of measurement	Fertility Attitude Questionnaire
Secondary outcomes	empty
Intervention groups	
<u>1</u>	
Description	Intervention group: Single-child working women receiving mindfulness-based cognitive behavioral therapy. Mindfulness-based cognitive behavioral therapy (MBCT) is an approach to psychotherapy that uses cognitive behavioral therapy (CBT) methods along with mindfulness meditation practices and similar psychological strategies. In MBCT, mindfulness is based on 4 principles including Body awareness (body position and body movement/activity), body sensations (including those related to emotions), mental states (including emotional states) and mental content (thoughts, images) are taught. In this study, the participants who meet the study entry criteria are randomly assigned to two control

and intervention groups. In the control group, there is no intervention, and in the intervention group, the method of cognitive therapy based on mindfulness (MBCT) is used. Before starting the treatment program, the training certificate of the MBCT course will be received and attached to the study, then the cognitive therapy program based on mindfulness for fertility attitude in the form of an 8-session program during 8 weeks by The researcher will be presented. Meetings will be held in groups. Contents and assignments will be presented to the people of the intervention group on a weekly basis. It will be considered that the participants, whenever they have a problem in doing the assignments, have more interaction with the researcher in person or virtually to ensure the correctness of the assignments. How to follow up the samples in 4 steps by filling out the questionnaire The first session (pre-test), the last session (post-test), and one month after the last session after the last training session.
