Efficacy of Posterior Leaf Spring Ankle Foot Orthosis on biomechanical parameters of drop foot post stroke patients

Protocol summary

Study aim
The aim of this study is to determine theeEffect of Posterior Leaf Spring AFO on biomechanics of drop foot in stroke population.

Design
This clinical trial will conduct in only one group in Movafaghian gait analyzis center on 20 drop foot post stroke drop foot population.

Settings and conduct
At the beginning of the examination, the patients were asked to walk at least for 10 to 20 min with their own PLS AFOs/shoes. After that, retro-reflective markers were set at anatomical landmarks according to Helen Hayes's method. Then, each one will walk in front of Vicon cameras and on the fKistler orce plate to capture biomechanical parameters. Data processing will proces by Vicon sof ware.

Participants/Inclusion and exclusion criteria
.The inclusion criteria were a clinically observed unilateral drop-foot using PLS AFO as a routine AFO and ability to walk at least 20 min without assistance

Intervention groups
Obtaining kinetic and kinematic of walking in gait libratory with the use of Posterior Leaf Spring AFO in one session of 60 minute with and without posterior leaf spring AFO

Main outcome variables
Kinetic parameters of walking included the ankle, knee and hip moments and powers Kinetic parameters of walking included the ankle, knee and hip angles

Scientific title
Efficacy of Posterior Leaf Spring Ankle Foot Orthosis on biomechanical parameters of drop foot post stroke patients

Public title
Efficacy of Ankle Foot Orthosis on stroke

Purpose
Other

Inclusion/Exclusion criteria

Inclusion criteria:

unilateral drop-foot using PLS AFO as a routine AFO ability to walk at least 20 min without assistance
Exclusion criteria:
severe heart or metabolic disease previous abnormalities in visual/vestibular functions emotional instability previous fracture of both lower limbs severe poly neuropathy presence of muscle spasms or contractures in lower extremity joints

Age
From **40 years** old to **60 years** old
Gender
Both

Phase

Health conditions studied

1

Description of health condition studied
stroke
ICD-10 code
ICD-10 code description

Primary outcomes

1

Description
The angle of the ankle, knee and hip
Timepoint
Before intervention and immidiatly after intervention
Method of measurement
By using camera

2

Description
Moment of the ankle, knee and hip
Timepoint
Before intervention and immidiatly after intervention
Method of measurement
By using camera and force plate

3

Description
power of the ankle, knee and hip
Timepoint
Before intervention and immidiatly after intervention
Method of measurement
By using camera and force plate

Secondary outcomes

empty

Intervention groups

1

Description
Intervention group: Obtaining kinetic and kinematic of walking in gait libratory with the use of Posterior Leaf Spring AFO in one session of 60 minute with and without posterior leaf spring AFO
