Comparison of the success rate of treatment with Depomedrol injection and extracorporeal shock waves (ESWT) in patients with heel pain due to plantar fasciitis

Protocol summary

Study aim

Comparison of the success rate of treatment with Depomedrol injection and extracorporeal shock waves (ESWT) in patients with heel pain due to plantar fasciitis in patients referred to Bouali Hospital

Design

A number of 86 patients are included in the study, so that each patient is assigned a number and randomly placed in two groups of 43 people according to the online random number table. Patient information is recorded in data collection forms and entered into SPSS version 26 statistical software. The rate of treatment success is evaluated using the Vas scale. The data is entered into the data collection form and then spss and analyzed.

Settings and conduct

The patients of the first group were treated with depomedrol injection and the second group were treated with shock wave therapy. A single dose of depomedrol 40mg/ml is injected into the heel of the foot inside the plantar fascia.for ESWT at first a ultrasonogram gel will be applied to heel and plantar fascia area .Then the device probe is placed in the heel and plantar fascia area and then treatment is performed with frequency of 1 to 20 Hz and a duration of 15 to 20 minutes.After a period of 4 months, the treatment success rate between depomedrol injection and shock wave therapy in patients was evaluated using the Vas scale.this process is done in Tehran Bouali hospital

Participants/Inclusion and exclusion criteria

admission:agree to cooperate/patient has plantar fascitis not admit:radiculopathy/prior history of calcaneal fx/calcaneal tumor/ra and as

Intervention groups

corticoid therapy:depomedrol injection physiotherapy: extracorporeal shock waves

Main outcome variables

Heel pain caused by plantar fasciitis is evaluated using the Vas scale.

Scientific title
Comparison of the success rate of treatment with Depomedrol injection and extracorporeal shock waves (ESWT) in patients with heel pain due to plantar fasciitis

Public title
Comparison of the success rate of treatment with Depomedrol injection and extracorporeal shock waves (ESWT) in patients with heel pain due to plantar fasciitis

Purpose
Treatment

Inclusion/Exclusion criteria
Inclusion criteria:
patient has plantar fascitis patient agree to cooperate
Exclusion criteria:
radiculopathy AS and RA prior history of calcaneal fx calcaneal tumor advanced neuropathy

Age
No age limit

Gender
Both

Phase
N/A

Groups that have been masked
No information

Sample size
Target sample size: **86**

Randomization (investigator's opinion)
Randomized

Randomization description
method : Simple randomization Random sequence generation: by using random number table from top to bottom ,even numbers belong to group a and odd numbers belong to group b Allocation concealment :central randomization

Blinding (investigator's opinion)
Not blinded

Blinding description

Placebo
Not used

Assignment
Parallel

Other design features

Secondary Ids

empty

Ethics committees

1

Ethics committee
Name of ethics committee
Ethics committee of Azad Tehran medical university

Province
Tehran
Postal code
1949635881

Approval date
2022-08-15, 1401/05/24

Ethics committee reference number
IR.IAU.TMU.REC.1401.165

Health conditions studied

1

Description of health condition studied
plantar fascitis

ICD-10 code
M72.2

ICD-10 code description
Other fibroblastic disorders

Primary outcomes

1

Description
score of disability due to plantar fasciitis by Oxford foot disability index

Timepoint
start of treatmet and 2 till 4 months after treatment

Method of measurement
oxford foot disability score

Secondary outcomes

empty

Intervention groups

1

Description
Intervention group: group a which is chosen by simple randomization and referred to physiotherapy for extracorporeal shock wave therapy that has a device put in contact with skin of heel and produce shockwave with frequency of 10ms and amplitude of 76 map

Category
Treatment - Devices

2

Description
Control group: group b : Depomedrol 40mg amp injected in the heel of the injured leg at the clinic

Category
Treatment - Drugs
