Comparison between invasive and noninvasive methods of blood gas monitoring on weaning process outcomes in patients undergoing cardiac surgery

Protocol summary

Summary

The purpose of this study is to compare invasive and noninvasive methods of blood gas monitoring during the weaning process in patients undergoing cardiac surgery. This clinical trial will be conducted in two groups. 60 patients who are undergoing open heart surgery who have our study inclusion criteria will be randomly allocated into two groups of control and intervention. After adequate explanations, written informed consent will be obtained from patients. After the operation and transferring the patients to the intensive care unit, capnography will be used instead of the arterial blood gas for the monitoring of patients in experimental group and then the ventilator Management and setting change will be done based on capnography and pulse oximetry. The weaning in the control group will be done based on hospital routines. Weaning time and arterial blood gases will be compared between groups.

General information

Acronym

Using the capnography during the weaning process

IRCT registration information

IRCT registration number: **IRCT201701016778N6**

Registration date: **2017-03-03, 1395/12/13**

Registration timing: **registered_while_recruiting**

Scientific title

Comparison between invasive and noninvasive methods of blood gas monitoring on weaning process outcomes in patients undergoing cardiac surgery

Public title

non invasive monitoring during weaning from mechanical ventilation

Purpose

Supportive

Inclusion/Exclusion criteria

Inclusion criteria: patients with non-emergency cardiac surgery; age greater than 20 and less than 70 years; negative history of previous cardiac surgery; Exclusion

criteria were: severe hemodynamic impairment; has a heart rate less than 60 beats per minute; Drainage more than 300 ml in the first hour

Age

From **20 years** old to **70 years** old

Gender

Both

Phase

N/A

Groups that have been masked

No information

Sample size

Target sample size: **60**

Health conditions studied

1

Description of health condition studied

weaning from mechanical ventilator

ICD-10 code

Z51.8

ICD-10 code description

Other specified medical care

Primary outcomes

1

Description

Weaning Time

Timepoint

Since entrance to ICU until extubation

Method of measurement

Using the Clock

Secondary outcomes

1

Description

Vital signs

Timepoint

Hour Since entering until extubation

Method of measurement

Using Patient Monitoring

2

Description

the amount of arterial carbon dioxide tention

Timepoint

ICU entrance and during the extubation

Method of measurement

using the arterial blood gas analysis

Intervention groups

1

Description

In the intervention group for monitoring during the weaning process, capnography and pulseoximetry are used instead of arterial blood gasses.

Category

Other

2

Description

The control group will received no intervention and hospital routine care will be done.
