

Clinical Trial Protocol

Iranian Registry of Clinical Trials

17 Sep 2026

Efficacy of the mindfulness and compassion based intervention on marital relationship quality.

Protocol summary

Study aim

Determining the effectiveness of the relationship enhancement intervention based on mindfulness and compassion on the quality of the relationship of distant married people

Design

A clinical trial with a control group (waiting list) with parallel groups, without blinding, on 24 long distant couples.

Settings and conduct

The intervention is held online on Skype and Google Meet platforms. Couples who have met the criteria via online questionnaire and confirming for participation in the study will be assigned to two intervention and control groups in a quasi random method while blinding will not be done. Participants in intervention group will be participate in 8 sessions individually.

Participants/Inclusion and exclusion criteria

Inclusion criteria include being in a long-distance relationship and having at least a middle school education. Exclusion criteria are not having more than one spouse and not having a physical or psychiatric illness.

Intervention groups

In the intervention group, the relationship enhancement intervention based on mindfulness and compassion will be implemented in eight 1-hour sessions for couples in the experimental group (including men and women) on the Skype or Google Meet platform separately. In the control group (waiting list), no intervention will be implemented.

Main outcome variables

Marital intimacy, marital satisfaction, trait mindfulness, relational mindfulness, sexual mindfulness

Health conditions studied

1

Description of health condition studied

Long distant couples

ICD-10 code

ICD-10 code description

Primary outcomes

1

Description

Marital Satisfaction

Timepoint

The evaluation will be done three times before the start of the intervention, immediately after the end of the intervention, 2 months after the end of the intervention.

Method of measurement

Couple Satisfaction Inventory

2

Description

Marital Intimacy

Timepoint

The evaluation will be done three times before the start of the intervention, immediately after the end of the intervention, 2 months after the end of the intervention.

Method of measurement

Marital Intimacy Questionnaire

Secondary outcomes

1

Description

Trait Mindfulness

Timepoint

The evaluation will be done three times i.e. before the start of the intervention, immediately after the end of the intervention, 2 months after the end of the intervention.

Method of measurement

Five-Faceted Mindfulness Questionnaire

2

Description

Relational Mindfulness

Timepoint

The evaluation will be done three times i.e. before the start of the intervention, immediately after the end of the intervention, 2 months after the end of the intervention.

Method of measurement

Relational Mindfulness Measure

3

Description

Sexual Mindfulness

Timepoint

The evaluation will be done three times i.e. before the start of the intervention, immediately after the end of the intervention, 2 months after the end of the intervention.

Method of measurement

Sexual Mindfulness Measure

Intervention groups

1

Description

Intervention group: The relationship enhancement intervention based on mindfulness and compassion will be implemented in eight 1-hour weekly sessions for the people of the experimental group on the Skype or Google Meet platform individually and separately. The contents of the sessions include body scanning meditation with yoga, love meditation with a focus on the spouse, sitting with awareness of breathing, practicing gazing at each other, practicing interaction with spouse, investigating obstacles and possibilities of mindfulness.

Category

Behavior

2

Description

Control group: It is in the form of a waiting list and during the study, they will not receive any intervention, but after the study, if the intervention is effective, the same sessions as the experimental group will be held for them.
