Comparison of the effects and side effects of Dysport and Masport in patients referred to the ultra-specialized oculoplasty clinic of Farabi Hospital in 1402

Protocol summary

Study aim

Comparing the effects and side effects of two drugs, Dysport and Masport

Design

A clinical trial with 2 random groups, Masport and Dysport, double-blind, randomized, phase 2 on 160 patients.

Settings and conduct

This study will be conducted in the oculoplastic clinic of Farabi Hospital in Tehran, Iran. The study will be conducted in a double-blind manner, and none of the doctors and patients will know the type of injected drug. Before and after the injection, the questionnaire is completed by the patients and the relevant doctor. Before and after the injection, the faces of the patients are photographed while laughing, frowning, and indifference. The patients are followed up at intervals of 2 weeks, 2 months, and 4 months after the injection.

Participants/Inclusion and exclusion criteria

1-Physical and mental health of the participants 2- Decision-making power and completely voluntary participation in the study 3- Allowed age range 27-57 4- Confirmation of the need for injection by the doctor and the candidate for Botox injection 5-Candidates for oculoplasties

Intervention groups

Patients in two intervention groups are included in the study, 80 people will be injected with masport drug and 80 people will be injected with dysport drug. The study was double-blind and none of the patients and related doctors knew about the type of medicine.

Main outcome variables

1- Investigating the effect of two drugs in the same doses in removing and reducing the depth of wrinkles in patients 2- Examining the short-acting and long-acting side effects of both drugs, including inflammation, redness, and drooping of the eyelids. 3- Checking the

shelf life of two drugs 4- Checking the need for re-injection and restoration of two drugs at intervals of 2 weeks, 2 months and 4 months

Scientific title

Comparison of the effects and side effects of Dysport and Masport in patients referred to the ultra-specialized oculoplasty clinic of Farabi Hospital in 1402

Public title

comparison between masport and dysport in facial botox

Purpose

Treatment

Inclusion/Exclusion criteria**Inclusion criteria:**

Physical and mental health The ability to make decisions regarding voluntary participation in the study Permissible age range in study (27-54 years old) Botox injection candidate in the studied areas

Exclusion criteria:

History of heavy surgeries and any type of fracture in any part of the face History of stroke and facial paralysis

Age

From **27 years** old to **57 years** old

Gender

Both

Phase

3

Groups that have been masked

- Care provider
- Investigator
- Outcome assessor
- Data analyser

Sample size

Target sample size: **160**

Randomization (investigator's opinion)

Randomized

Randomization description

Randomization is performed using a stratified permuted block randomization method with random block lengths (2, 4, 6). After screening, patients will be randomly assigned to groups A and B in a 1:1 ratio to receive Dysport or Masport injections. Stratification variables, including age and gender, will be determined as follows: ARMS (RATIOS: 1:1): * A * B STRATIFY: Yes TOTAL STRATA: 4 STRATIFICATION VARIABLES: 1) Sex: * male * female 2) age: * <40 * >40 For this purpose, a randomization program was written in R software with the help of the center's biostatistician, and the randomization output was produced as an Excel file. Patients, researchers, and site personnel (except pharmacists) are blinded to the type of injectable drug and will remain so until the end of the follow-up period and analysis of the study data.

Blinding (investigator's opinion)

Double blinded

Blinding description

In this study, which is a kind of double-blind study, all participating patients and doctors involved, including the

relevant professor who is responsible for the injection and the relevant resident who is responsible for coordinating and writing articles and theses, as well as the nurse related to The design is all kept blind during the design and it is an injectable drug type (Mesport or Dysport brand) do not know. Injection vials are prepared in completely identical and similar syringes by the relevant person and brought to the hospital.

Health conditions studied**1****Description of health condition studied**

Investigating the therapeutic effects of two drugs, MASPORT and DYSPORT, on wrinkles around the eyes. forehead

ICD-10 code

H00-H06

ICD-10 code description

بررسی اختلالات کاسه چشم و پلک ها

Primary outcomes**1****Description**

1- To investigate the effect of two drugs in the same doses in removing and reducing the depth of wrinkles in patients.

Timepoint

At the beginning of the study, the day of injection, 14 days later, 2 months later and 4 months after injection

Method of measurement

A questionnaire prepared and completed by the doctor and the patient and photos taken of the target areas before and after the injection, which examines the function of the frown muscles and forehead muscles.

2

Description

2- Examining the short-acting and long-acting side effects of both drugs, including inflammation, redness, and drooping of the eyelids.

Timepoint

At the beginning of the study, the day of injection, 14 days later, 2 months later and 4 months after injection

Method of measurement

A questionnaire prepared and completed by the doctor and the patient and photos taken of the target areas before and after the injection, which examines the function of the frown muscles and forehead muscles.

3

Description

3- Checking the shelf life of two drugs

Timepoint

At the beginning of the study, the day of injection, 14 days later, 2 months later and 4 months after injection

Method of measurement

A questionnaire prepared and completed by the doctor and the patient and photos taken of the target areas before and after the injection, which examines the function of the frown muscles and forehead muscles.

4

Description

4- Checking the need for re-injection and restoration of two drugs at intervals of 2 weeks, 2 months and 4 months.

Timepoint

Secondary outcomes

empty

Intervention groups

1

Description

Intervention group: Intervention group 1: under MASPORT injection. Each person is injected with 110 units of medicine that contains the chemical composition

of botulinum toxin and is manufactured by Masoun Daru pharmaceutical company with the permission of the Ministry of Health in Iran. 500 vials of this medicine are diluted with 2.6 cc of distilled water and placed in an anonymous and unmarked vial for the validity of randomization, and in each person, 50 units of the forehead area, 30 units of the frown line, and 30 units of the wrinkles around the eyes are injected with a syringe. In this study, 1 injection was performed.

Treatment - Drugs

2

Description

Control group: intervention group 2: they are subjected to DYSPORT injection. Each person is injected with 110 units of medicine that contains the chemical composition of botulinum toxin and is available in the country under the brand name DYSPORT with the official license of the Ministry of Health as an import made in Italy or France. 500 vials of this medicine are diluted with 2.6 cc of distilled water and placed in an anonymous and unspecified vial for the validity of randomization, and 50 units of the forehead area, 30 units of the frown line, and 30 units of the wrinkles around the eyes are injected with an insulin syringe. In this study, 1 injection was performed
