Comparison of the effect of Neural Mobilization Techniques on Pain, Disability and Straight leg raising in Patients after Lumbar Discectomy between the experimental and control group

Protocol summary

Study aim

To explore the effectiveness of neurodynamic techniques on pain, straight leg raising (SLR) range, and disability in patients after lumbar discectomy

Design

A clinical trial was conducted involving a control group, with factorial groups, utilizing a double-blind, two-sided randomized design, on a total of 30 patients. Coin tossing was employed for randomization.

Settings and conduct

A total of 10 physiotherapy sessions with a one-day interval for both groups at Iran University of Medical Sciences in. Blinding was implemented for the participants, the evaluator of final results, and the statistical analyser.

Participants/Inclusion and exclusion criteria

All individuals residing in Tehran who have undergone lumbar discectomy surgery at the lower levels of the lumbar spine

Intervention groups

Both control and intervention groups undergo a 10-session treatment program with a 1-day interval between sessions, which includes the following components: 1. 20-minute high TENS. 2. 15-minute infrared therapy. 3. Instruction in stability exercises provided to all patients. 4. For the intervention group, in addition to the aforementioned exercises, neural mobilization techniques targeting the lower extremities and lumbar spine joints are applied by the researcher, considering these structures' relationship with nerves.

Main outcome variables

SLR, radicular pain, degree of disability

Scientific title

Comparison of the effect of Neural Mobilization Techniques on Pain, Disability and Straight leg raising in

Patients after Lumbar Discectomy between the experimental and control group		intervention grouping like S12).	
Public title	Effect of Neural Mobilization Techniques in Patients after Lumbar Discectomy	Placebo	Not used
Purpose	Treatment	Assignment	Parallel
Inclusion/Exclusion criteria	Inclusion criteria: Age range 20-50 Body mass index less than 30 Having undergone lumbar discectomy no more than one week prior to enrollment Positive Straight Leg Raise (SLR) test Onset of symptoms prior to surgery within a maximum of one year Severity of radicular pain ≥ 3 on the Visual Analog Scale (VAS). Oswestry Disability Index (ODI) score $\geq 20\%$ Exclusion criteria: patient's unwillingness to cooperate in the study history of previous spinal surgery history of mental disorders systemic diseases (any cardiovascular, infectious, metabolic condition that could affect the assessment and treatment process) stability disorders in the spine (spondylolysis, spondylolisthesis, etc.).No contractures or musculoskeletal disorders in the lower extremities that would hinder neurological mobilization tests and treatments contractures or musculoskeletal disorders in the lower extremities that would hinder neurological mobilization tests and treatments sacroiliac joint pain syndrome. hip joint disorders pregnancy established hyperlordotic posture nerve paralysis due to intervertebral disc protrusion.	Other design features

Sample size	Target sample size: 28	Ethics committee	
Randomization (investigator's opinion)	Randomized	Name of ethics committee	
Randomization description	Two test and control groups were designed for the study. The randomization was carried out using simple randomization and coin tossing. The control group was designated as "heads," and the test group as "tails." Based on the sample size, coin tossing was performed 28 times, and individuals were randomly assigned to two groups of 14 participants each.	Ethics committee of Iran University of Medical Sciences	
Blinding (investigator's opinion)	Single blinded	Street address	
Blinding description	Those responsible for data collection and those assessing the outcome are kept blind to the intervention groups. This is done by assigning neutral codes to the participants (without giving information about patients'	Hemmat Expressway, Next to Milad Tower, University of Medical Sciences of Iran, Central Headquarters Building, Research and Technology Deputy
