Iranian Registry of Clinical Trials

16 Sep 2026

Comparison of Postoperative nausea and vomiting prevalence in patients with routine NPO and NPO with clear fluids 2 hours before cataract surgery

Protocol summary

Study aim

Comparison of Postoperative nausea and vomiting prevalence in patients with routine NPO and NPO with clear fluids 2 hours before cataract surgery

Design

This study will be conducted as a randomized clinical trial (blocks of four), double-blind, with parallel groups, without a control group, with the participation of 80 patients.

Settings and conduct

This study is a randomized clinical trial (blocks of four), double-blind (participants and results analyzer), with parallel groups, without a control group and with the participation of 80 cataract surgery candidates referred to Imam Reza Hospital (Tabriz) will be done.

Participants/Inclusion and exclusion criteria

The criteria for entering the study include: ASA class I and II, candidates for cataract surgery and consent to participate in the study, and the exclusion criteria are: having diabetes or other endocrine disorders, using antiemetics in the last 24 hours, Positive history of motion sickness or PONV and patients with Crohn's disease.

Intervention groups

Patients in the intervention group can eat clear liquids up to two hours before anesthesia, while patients in the control group will not eat anything from eight hours before anesthesia.

Main outcome variables

Nausea and vomiting

Scientific title

Comparison of Postoperative nausea and vomiting prevalence in patients with routine NPO and NPO with clear fluids 2 hours before cataract surgery

Public title

Postoperative nausea and vomiting prevalence in patients with routine NPO and NPO with clear fluids 2 hours before surgery

Purpose
Prevention

Inclusion/Exclusion criteria
Inclusion criteria:
 American Standards Association(ASA)class I and II
 Candidate for cataract surgery Consent to participate in the study
Exclusion criteria:
 Having diabetes or other endocrine disorders Use of antiemetics in the last 24 hours Positive history of motion sickness or Postoperative nausea and vomiting(PONV)
 Patients with Crohn's disease

Age
From **18 years** old to **65 years** old

Gender
Both

Phase
N/A

Groups that have been masked

Sample size
Target sample size: **80**

Randomization (investigator's opinion)
Randomized

Randomization description
In this study, with a sample size of 80, we use the patients using the block permutation randomization method, which is used in this method to balance the number of allocated samples, and with 4 people in each block. We assemble the possible blocks as follows. block 1: BBAA, block 2: AABBB, block 3: ABAB, block 4: BABA, block 5: ABBA, and block 6: BAAB, we need 20 blocks for 80 people. It is random in the block method. We choose numbers from one to six. For example, if number 6 is chosen as the first block and number 2 as the second block, the people who enter the study will be given BAABAAABBB in order from left to right. and finally they were divided into two intervention groups (group A) and control group (group B).

Blinding (investigator's opinion)
Double blinded

Blinding description
The thesis results analyst who analyzed the expected outcome and also the participants remained unaware of the type of procedure performed and were blind during the study; Therefore, this study was conducted in a double-blind manner.
