Iranian Registry of Clinical Trials

05 Jul 2026

A Combined Protocol of Emotional Schema Therapy and Integrated Transdiagnostic Therapy on Brain Executive Functions and Emotional Regulation in People with Generalized Anxiety Disorder

Protocol summary

Study aim

"Evaluating the effectiveness of a combined emotional schema therapy protocol and an integrated transdiagnostic protocol on brain executive functions and emotional regulation in individuals diagnosed with generalized anxiety disorder."

Design

"A single, non-blinded clinical trial on 5 patients."

Settings and conduct

"First, we make an announcement at the Imam Hossein psychiatric clinic. Then, using convenience sampling, we select the sample participants based on the inclusion criteria. Next, for these individuals, both orally and in writing, the research plan and type of treatment are explained, and they will sign a consent form related to the ethics committee. After the individuals' agreement and completion of the relevant questionnaires, we will hold the therapy sessions at Imam Hossein Hospital."

Participants/Inclusion and exclusion criteria

"Individuals diagnosed with generalized anxiety disorder are included in the study, while those with a comorbid psychiatric disorder or any other psychiatric disorder are not included."

Intervention groups

"After evaluating the patients, we proceed to modify their emotional schemas, undertake cognitive restructuring, and provide psychological training on mindfulness, emotional regulation, and cognitive flexibility. After each session, an assignment will be given to the patient to reinforce the teachings and generalize them to everyday life."

Main outcome variables

emotional regulation ; Brain Executive Functions ; Generalized Anxiety Disorder

Scientific title

A Combined Protocol of Emotional Schema Therapy and Integrated Transdiagnostic Therapy on Brain Executive Functions and Emotional Regulation in People with Generalized Anxiety Disorder

Public title

Investigating the effectiveness of integrated psychotherapy on generalized anxiety disorder

Purpose

Treatment

Inclusion/Exclusion criteria

Inclusion criteria:

Clients to the Imam Hossein psychiatric clinic in Tehran Diagnosed with generalized anxiety disorder (based on a psychiatric specialist's diagnosis) At least 4 weeks should have passed since the medications were stabilized Age range of 20 to 45 years Middle socio-economic level Intermediate level of education (from diploma to bachelor's degree)

Exclusion criteria:

Diagnosed Social anxiety disorder (based on a psychiatric specialist's diagnosis) Patients with delusions and hallucinations (psychosis) Patients with verbal disabilities (due to the impossibility of obtaining information from them) Patients with generalized anxiety disorder who are currently going to psychotherapy sessions. Patients with thyroid problems Patients using drugs Diagnosed with a mental disorder comorbid

F41.1

ICD-10 code description

Generalized anxiety disorder

Primary outcomes

1

Description

The score of Executive Functions the short Persian form (Parhun et al., 2023) of the Adult Self-Report of Executive Functions Scale (Roth et al.) is obtained

Timepoint

"Before the start of the study, three times at intervals of one week, then at 3, 6, 9 weeks after the start of psychotherapy sessions, once at the end of the treatment, and once 1 month after the end of therapy sessions."

Method of measurement

Persian version of Adult Executive Functions Scale (normized version of Behavioral Rating of Executive Functions) Roth et al.

2

Description

the score of the Cognitive Emotion Regulation Questionnaire (Garnefski and Kraaij, 2006)

Timepoint

"Before the start of the study, three times at intervals of one week, then at 3, 6, 9 weeks after the start of psychotherapy sessions, once at the end of the treatment, and once 1 month after the end of therapy sessions."

Method of measurement

Cognitive Regulation of Emotion Questionnaire (Garnefski and Kraaij, 2006)

3

Description

the score of the Generalized Anxiety Disorder questionnaire (GAD-7)

Timepoint

"Before the start of the study, three times at intervals of one week, then at 3, 6, 9 weeks after the start of psychotherapy sessions, once at the end of the treatment, and once 1 month after the end of therapy sessions."

Method of measurement

Generalized Anxiety Disorder Scale Questionnaire (GAD-7)

Secondary outcomes

empty

Intervention groups

1

Description

"Intervention group: 5 participants in the research study, diagnosed with generalized anxiety disorder, participate in 10 individual psychotherapy sessions. The duration of each session is one hour. During the sessions Using the integrated protocol of Leahy's emotional schema therapy and Barlow's integrative transdiagnostic therapy, the evaluation and modification of emotional schemas, cognitive reconstruction, training and application of mindfulness, emotional regulation, and cognitive flexibility are addressed. Description of the intervention : Pre- Assessment The first stage involves a comprehensive assessment to evaluate the patient's level of anxiety, emotional regulation abilities, and executive function performance. Standardized assessment tools like the Generalized Anxiety Disorder 7-item (GAD-7) scale, Cognitive Regulation of Emotion Questionnaire (Garnefski and Kraaij, 2006), and Persian version of Adult Executive Functions Scale (Parhun et al., 2023) will be used. Schema Identification : We begin by identifying the patient's schemas that relate to their anxiety, focusing on the cognitive, emotional, and behavioral responses that contribute to their Generalized anxiety disorder. Schema Modification : Through a process of cognitive restructuring, patients are guided to challenge their schemas, change their maladaptive thought patterns, and develop healthier ways of interpreting their experiences. Emotional Regulation Training : We utilize the techniques from Dialectical Behavior Therapy (DBT) and Acceptance and Commitment Therapy (ACT) to teach patients skills to understand and manage their emotions better. Cognitive Flexibility Training : Using a combination of cognitive-behavioral techniques and mindfulness practices, we aim to enhance the patient's ability to shift their attention and adapt their thinking in response to changing circumstances. Schema- Focused Emotional Regulation : After separately working on Emotional Schema Therapy and Integrated Transdiagnostic Therapy, we integrate the two by focusing on schema-focused emotional

regulation. This helps patients recognize and alter schemas while simultaneously regulating their emotions. Cognitive Flexibility and Schema Modification: As patients gain better control over their emotional responses, we further integrate cognitive flexibility training within schema modification, which aids them to challenge and change their schemas more effectively. Post- Assessment : The same standardized tools used in the pre-assessment will be employed to evaluate the progress and efficacy of the therapy. Finally, patients are provided with strategies and plans to maintain their gains and cope with potential future stressors. Regular follow-ups are conducted to reinforce the therapy's effectiveness and manage any recurring symptoms

Sharing plan

Deidentified Individual Participant Data Set (IPD)

No - There is not a plan to make this available

Justification/reason for indecision/not sharing IPD

"Since the research plan is related to a thesis, only the study protocol, clinical study report, and study results will be published. The participant data file contains information about the participants, and due to the preservation of individuals' privacy, it cannot be published."

Study Protocol

Yes - There is a plan to make this available

Statistical Analysis Plan

Not applicable

Informed Consent Form

No - There is not a plan to make this available

Clinical Study Report

Yes - There is a plan to make this available

Analytic Code

Not applicable

Data Dictionary

Not applicable

Title and more details about the data/document

"The steps of the clinical study, such as the number of participants, the inclusion and exclusion criteria for the research plan, the sampling method, the therapeutic protocol, and the study results, will be detailed in the thesis and article."

When the data will become available and for how long

"Access period starts 6 months after the publication of the results."

To whom data/document is available

"Article reviewers and research and academic individuals."

Under which criteria data/document could be used

"For the purpose of study or research with proper citation."

From where data/document is obtainable

Send an email to the thesis supervisor at hashemi.hs@gmail.com

What processes are involved for a request to access data/document

"First, the individual requesting the data sends their request to the provided email address, and the request will be responded to as soon as possible."
