Investigating the effect of MIND diet on physical fitness and anthropometric indices in female high school students: a cluster randomized controlled trial

Protocol summary

Study aim

The purpose of this study is to determine the effect of MIND diet on physical fitness and anthropometric factors among female high school students.

Design

This study is a cluster randomized controlled trial

Settings and conduct

In this study, 6 eligible schools will be randomly assigned to one of the intervention and control arms and two types of MIND and control diets will be studied. people will be followed up for 3 months

Participants/Inclusion and exclusion criteria

Inclusion criteria: 1. High school girls aged 15 to 17 years
2. Informed consent of participants and their parents
Exclusion criteria: 1) Cardiovascular diseases. 2) History of liver disease (alanine aminotransferase (ALT) and aspartate transaminase (AST) more than three times the normal values) and kidney disease (BUN and creatinine values higher than normal). 3) Suffering from cancer or a history of it. 4) suffering from a known cardiovascular disease (coronary artery disease, stroke, congestive heart disease) or a history of heart surgery. 5) having type 2 diabetes (fasting blood sugar above 126) or type 1 diabetes 6) receiving a special diet 7) having any underlying disease 8) people who do professional sports or are athletes 9) Allergy to any of the MIND diet components 10) Obese people (above 97th percentile)

Intervention groups

The MIND diet is a combination of the Mediterranean diet and DASH, which will be adjusted according to the ratio of macronutrients: 50-60% carbohydrates, 25-30% fat, and 15-20% protein for the intervention group and the diet of the control group is similar to the typical Iranian diet with a combination of macronutrients. 50 - 60% carbohydrates, 25-30% fat and 15-20% protein

Main outcome variables

Weight, body mass index, waist circumference , body fat

percentage, skeletal muscle percentage, cardiorespiratory fitness, anaerobic strength and Handgrip strength

Scientific title
Investigating the effect of MIND diet on physical fitness and anthropometric indices in female high school students: a cluster randomized controlled trial

Public title
The effect of MIND diet on physical fitness

Purpose
Education/Guidance

Inclusion/Exclusion criteria
Inclusion criteria:
 High school girls aged 15 to 17 years Informed consent of participants and their parents Having regular menstruation
Exclusion criteria:
 cardiovascular diseases History of liver and kidney disease Suffering from cancer or a history of cancer Having a known cardiovascular disease or a history of heart surgery Having type 2 diabetes (fasting blood sugar above 126) or type 1 diabetes Recipient of a special diet Having any underlying disease People who do professional sports or are athletes Allergy to any of the components of the MIND diet Obese people (over 97th percentile) History of women's diseases and use of hormonal drugs

Age
From **15 years** old to **17 years** old

Gender
Female

Phase
N/A

Groups that have been masked
No information

Sample size
Target sample size: **300**

Randomization (investigator's opinion)
Randomized

Randomization description
Among the high school girls' schools in Yazd that are eligible to enter the study, 6 schools are randomly selected using SPSS software. 6 envelopes containing intervention or control codes prepared in advance are provided to the investigators. After opening each envelope, the investigators identify each school. In each school, according to the assigned group, 50 students are randomly selected (by generating 50 random numbers and choosing from the list of students of each school) and enter the study.

Blinding (investigator's opinion)
Not blinded

Primary outcomes

1

Description

Weight

Timepoint

The beginning and end of the study (after three months)

Method of measurement

A scale with an accuracy of 100 grams

2

Description

waist circumference

Timepoint

The beginning and end of the study (after three months)

Method of measurement

tape measure with an accuracy of 0.5 cm

3

Description

Body mass index

Timepoint

The beginning and end of the study (after three months)

Method of measurement

The ratio of weight to the square of height

4

Description

Percentage of fat mass

Timepoint

The beginning and end of the study (after three months)

Method of measurement

body composition analyzer (Omron)

5

Description

Skeletal muscle percentage

Timepoint

The beginning and end of the study (after three months)

Method of measurement

body composition analyzer (Omron)

6

Description

Cardiorespiratory fitness

Timepoint

The beginning and end of the study (after three months)

Method of measurement

20 m shuttle run test

7

Description

Handgrip strength

Timepoint

The beginning and end of the study (after three months)

Method of measurement

Handgrip

8

Description

Anaerobic power

Timepoint

The beginning and end of the study (after three months)

Method of measurement

Standing broad jump

Secondary outcomes

1

Description

Depression score

Timepoint

The beginning and end of the study (after three months)

Method of measurement

PHQ-9 and DASS-21 questionnaires

2

Description

Anxiety score

Timepoint

The beginning and end of the study (after three months)

Method of measurement

GAD-7 and DASS-21 questionnaires

3

Description

Stress score

Timepoint

The beginning and end of the study (after three months)

Method of measurement

DASS-21 questionnaire

4

Description

Overall health score

Timepoint

The beginning and end of the study (after three months)

Method of measurement

GHQ questionnaire

5

Description

The obtained score of premenstrual syndrome symptoms

Timepoint

The beginning and end of the study (after three months)

Method of measurement

PSST questionnaire

6

Description

The obtained score of menstrual distress

Timepoint

The beginning and end of the study (after three months)

Method of measurement

MMDQ questionnaire

7

Description

sleep quality and quantity

Timepoint

The beginning and end of the study (after three months)

Method of measurement

Pittsburgh Sleep Quality Index (PSQI)

8

Description

mental health

Timepoint

The beginning and end of the study (after three months)

Method of measurement

SDQ questionnaire

9

Description

health-related quality of life

Timepoint

The beginning and end of the study (after three months)

Method of measurement

SF-36 questionnaire

Intervention groups**1****Description**

Intervention group: Mediterranean-DASH Diet Intervention for Neurodegenerative Delay The MIND diet is a combination of the Mediterranean diet and DASH, which will be adjusted according to the ratio of macronutrients: 50-60% carbohydrates, 25-30% fat, and 15-20% protein for the intervention group. The MIND diet contains high amounts of green leafy vegetables and other vegetables, berries, nuts, olive oil, whole grains, fish, legumes, and poultry.

Category

Lifestyle

2**Description**

Control group: the usual diet which is similar to the usual Iranian diet with a macro-nutrient composition of 60-50% of carbohydrates, 25-30% of fats and 15-20% of proteins.

Title and more details about the data/document

The general characteristics of the participants (without mentioning names and personal information) as well as the data for baseline and post-intervention values for primary and secondary outcomes will be made available to those interested after submitting the researchers' request and reviewing the principal investigators.

When the data will become available and for how long

The data will be available to the researchers when the related articles are published.

To whom data/document is available

The data will be available for all researchers interested in the subject.

Under which criteria data/document could be used

Data will be available if the interested researcher(s) fills the proposal for a joint project and the sponsor of the study (Shahid Sadoughi University of Medical Sciences) confirms the protocol of the project.

From where data/document is obtainable

The data can be obtained from: Dr. Amin Salehi-Abargouei, Ph.D. in Nutrition Department of Nutrition Faculty of Public Health Shahid Sadoughi University of Medical Sciences Yazd, PO Code 8915173160 Iran
Tel: +98-35-31492229 Fax: +98-35-38209119 Email: abargouei@ssu.ac.ir Alternate email: abargouei@gmail.com

What processes are involved for a request to access data/document

The interested investigators should provide a brief description of the data needed and their reason for asking the data by contacting the principal investigator. The principal investigator will assess the possibility of sharing the data and if applicable will ask for a joint proposal. The joint proposal will be sent to the vice chancellery for research, Shahid Sadoughi University of Medical Sciences (the sponsor) and the data will be sent by the principal investigator if the sponsor confirms the cooperation.
