The effects of Ginger (*Zinger officinale* Roscoe) on the prevention of PVC in patients with palpitation

Protocol summary

Study aim

The effects of Ginger (*Zinger officinale*) on the prevention of PVC in patients with palpitation

Design

Phase 2-3 randomized double-blinded placebo parallel clinical trial on 48 patients Randomization using RandoMaization.com

Settings and conduct

This study will perform in the heart ward and clinic of Imam Reza Hospital in Mashhad. Patients are randomly assigned to Ginger and placebo groups. Patients and the main researcher are unaware of the group assignment.

Participants/Inclusion and exclusion criteria

Inclusion criteria: Consent to admission to the study; Patients with heart palpitations; The number of PVCs during one day less than 15% in the 24-hour Holter rhythm. Not inclusion criteria: Previous history of heart palpitations; History of receiving medications for PVC ; Structural heart disorder; stomach ulcers or duodenal ulcers; Taking anticoagulants such as warfarin, aspirin, and enoxaparin; Breastfeeding or pregnancy; consumption of omega-3, ciprofloxacin, loratadine, escitalopram, montelukast, and levothyroxine; kidney stone; History of taking medicines containing ginger.

Intervention groups

Patients with heart palpitations receiving Ginger capsule (250 mg once daily) for ten days

Main outcome variables

Number of PVCs during 24 h

Phase

2-3

Groups that have been masked

- Participant
- Investigator
- Data analyser

Sample size

Target sample size: **48**

Randomization (investigator's opinion)

Randomized

Randomization description

The blocked randomization method is used. The volume of each block will be four. Then the list of blocks is written and numbers assigned to them, for example (AABB(1)- BBAA(2)- BABA(3)- BAAB(4)), which will be 12 blocks according to the sample size of 48. Then random numbers between 1 and 12 are selected according to the randomization site Randomization.com and finally, the treatment allocation list is determined based on the random numbers.

Blinding (investigator's opinion)

Double blinded

Blinding description

Blinding is done using sealed envelopes. Furthermore, due to using a placebo similar to the intervention treatment, the investigator and the participants will not be informed of the assigned treatment, and the analyst will also be unaware of the assigned treatment for the two groups. Finally, after analyzing the data, the researcher who prepared the packages will reveal the codes A and B.
