

Clinical Trial Protocol

Iranian Registry of Clinical Trials

29 Jun 2026

Investigating the effect of intervention with psychosexual approach on sexual self-care of unmarried young girls

Protocol summary

2023-10-29, 1402/08/07

Study aim

Investigating the effect of intervention with psychosexual approach on sexual self-care of young girls

Design

Two-arm parallel-group randomized trial. The sample size was determined 60 for each group and a total of 120. In this study, the randomization method will be a randomized block design with a block of size 4.

Settings and conduct

The place of study is Tehran University of Medical Sciences. The study population is the first-year unmarried female students of Tehran University of Medical Sciences. Blinding is not done in this study.

Participants/Inclusion and exclusion criteria

Inclusion criteria: Being female; Being single; Freshman in medical science Exclusion criterion: Participation in another clinical trial

Intervention groups

The intervention group will have access to the intervention content weekly for 4 weeks. The control group will receive content unrelated to the research and will not have access to the content of the self-care promotion intervention until the end of the research.

Main outcome variables

Sexual self-care

Groups that have been masked

No information

Sample size

Target sample size: **120**

Randomization (investigator's opinion)

Randomized

Randomization description

Randomization will be done by block method and using the randomization table made with Random Allocation Software with blocks of four and individual randomization units. In order to hide the random allocation from the researcher, envelopes are prepared as many as the sample size, and each of the random sequences created is recorded on paper and placed inside the envelope, and finally, the lids of the envelopes are glued. At the time of registration of people, based on the order of samples, one of the envelopes will be opened and the assigned group of that sample will be determined.

Blinding (investigator's opinion)

Not blinded

Intervention groups

1

Description

Intervention group: The intervention group will have access to the intervention content online and offline weekly for 4 weeks (8 sessions). The content of the intervention includes training in the dimensions of sexual and gender identity of girls and boys, sexual and reproductive rights, meeting sexual needs, marriage, sexually transmitted infections, unwanted pregnancy, unsafe abortion, and life skills. During the intervention period, the researcher will answer questions related to the intervention in a WhatsApp support group to follow up and prevent people from dropping out. The standard questionnaires will be completed again before and after the end of the intervention, as well as 3 months after the end of the intervention.

Title and more details about the data/document

Data of the study would be available after the unrecognizable process of participants.

When the data will become available and for how long

6 months after publishing the results

To whom data/document is available

Research results would be available for academic researchers

Under which criteria data/document could be used

Research results would be available for the same research

From where data/document is obtainable

Dr. Raziye Maasoumi email: r_masoumi@sina.tums.ac.ir

What processes are involved for a request to access data/document

Sending a request by email attendance to the office of corresponding project presentation the reasons for the similarity of two projects studying the proposal by corresponding of project final decision making with corresponding author access of data in the office of the corresponding author
