

Clinical Trial Protocol

Iranian Registry of Clinical Trials

18 Sep 2026

Comparison of the effects of oral and injectable antiquaguane in the prevention of thromboembolic events in patients with gynecological cancers who underwent surgery.

Protocol summary

Registration timing: **prospective**

Study aim

Determining and comparing the effects of oral and injectable anticoagulants in the prevention of thromboembolic events in patients with gynecological cancers who underwent surgery.

Last update: **2023-11-08, 1402/08/17**

Update count: **0**

Registration date

2023-11-08, 1402/08/17

Design

Clinical trial with control group, with parallel groups, without blinding, randomized, phase 2 on 100 patients. A table of random numbers was used for randomization.

Settings and conduct

This study is conducted on women who had a history of surgery for gynecological cancers and are candidates for receiving oral or injectable anti coagulants. This study will be conducted in 2023 in Al-Zahra Hospital and Beheshti Hospital in Isfahan. Blinding was not done in this study.

Recruitment status

Recruitment complete

Funding source

Participants/Inclusion and exclusion criteria

This study is conducted on women who have a history of surgery for gynecological cancers and are candidates for receiving oral or injectable anticoagulants. People with a history of thromboembolic events will not be included in the study

Expected recruitment start date

2023-12-22, 1402/10/01

Expected recruitment end date

2024-02-20, 1402/12/01

Actual recruitment start date

empty

Actual recruitment end date

empty

Trial completion date

empty

Intervention groups

The intervention performed in this study is the administration of oral anticoagulant drug (Apixaban) in one group and the administration of injectable anticoagulant (Enoxaparin) in the other group.

Main outcome variables

Thrombosis

Scientific title

Comparison of the effects of oral and injectable antiquaguane in the prevention of thromboembolic events in patients with gynecological cancers who underwent surgery.

Public title

Oral and injectable anti-thrombotic in the prevention of thromboembolic events

Purpose

Treatment

Inclusion/Exclusion criteria

Inclusion criteria:

People who have undergone surgery for gynecological cancers Candidate to receive oral or injectable anticoagulants

Exclusion criteria:

Lack of consent to continue participating in the study
History of thromboembolic events

Age

From **18 years** old to **65 years** old

Gender

Female

Phase

2-3

Groups that have been masked

No information

Sample size

Target sample size: **100**

Randomization (investigator's opinion)

Randomized

Randomization description

Randomization is simple and done with the help of a table of random numbers. According to the number of participants in the study, a sequence of random numbers is created with the help of a random number table, and each number is placed in an aluminum envelope, and the back of the envelopes is numbered according to the sequence process. According to the order of entry into the study, an envelope is opened and the sequence number inside is determined. If the number is even, the person will be placed in the second group, and if the number is odd, the person will be placed in the first group.

Blinding (investigator's opinion)

Not blinded
