Comparative effects of stretching and PNF hold relax technique for shoulder mobility in post mastectomy patient - A Randomized Clinical Trial

Protocol summary

Study aim

To compare the effects of stretching and PNF Hold Relax technique for shoulder mobility in post mastectomy patients

Design

Randomized clinical trial

Settings and conduct

Government and Private hospitals of Faisalabad

Participants/Inclusion and exclusion criteria

Inclusion criteria 1. Age 30-60y 2. Females 3. Post mastectomy patients Exclusion criteria 1. Males 2. Females with chronic illness and traumas

Intervention groups

Group A will receive stretching Group B will receive hold relax technique

Main outcome variables

Shoulder disability

General information

Reason for update

To update important information
