Comparison effect of migroherb herbal drug(Tanacetum parthenium, Matricaria chamomilla and magnesium) and Venlafaxine on the severity and frequency of headache and the quality of life of migraine sufferers

Protocol summary

Study aim

General goal:compare the effect of migroherb with venlafaxine in migraine exclusive Determining the demographic and clinical status of migraine patients in the two groups of venlafaxine and migroherb Determining and comparing the severity, duration, frequency of disease attacks and quality of life of migraine patients before and after treatment in two groups

Design

Clinical trial with two parallel groups, three blinded, randomized, phase 3 on 70 patients. Randomization by Permuted block method

Settings and conduct

The research carried out in 2023-2024 in the Beheshti clinic in Kashan.70 patients with episodic migraine with written consent, and they were randomly assigned to one of the two groups of migroherb or venlafaxine. All receive standard treatment with sodium valproate. The duration of the study is 12 weeks. The monthly HIT6 test, the beginning and the end of the study, MIDAS test are performed. At the end, the changes of the subjects will be checked and compared with the beginning of the study in each group and between the two groups. Blinding: the drugs are prepared in the same packaging and appearance and size, and then they are coded based on the codes that have been previously prepared using a table of random numbers.The doctor, the patient, and the data collector act based on the code during the research

Participants/Inclusion and exclusion criteria

Entry requirements: Age 18-65 years and confirmation of episodic migraine by a neurologist Exit conditions:Taking corticosteroids, OCP, other anti-migraine drugs (except sodium valproate 200 daily);Tension headache or chronic migraine;History of liver, kidney, diseases;pregnancy and lactation;Migraine onset after age 50; psychosis, major

depression, bipolar

Intervention groups

group one :venlafaxine and sodiumvalproate Group two :migroherb and sodiumvalproate

Main outcome variables

Frequency, intensity, duration of attack

Sample size Target sample size: 70 Randomization (investigator's opinion) Randomized Randomization description Randomization is done by block method (Permuted block randomization) so that first all 4 blocks containing two codes A and B are prepared (4 blocks) then random blocks are selected by placement using a table of random numbers. 26 blocks) These blocks form a	Primary outcomes 1 Description Impact on quality of life

Timepoint

At the beginning of the study (before the start of the intervention) and one month, two months and three months after the start of Migroherb or Venlafaxine

Method of measurement

HIT6 (Headache Impact Test) questionnaire

2

Description

Headache attacks frequency

Timepoint

At the beginning of the study (before the start of the intervention) and three months after the start of migroherb or venlafaxine

Method of measurement

MIDAS (Migraine Disability Assessment) questioner

3

Description

Severity of headache attacks

Timepoint

At the beginning of the study (before the start of the intervention) and three months after the start of migroherb or venlafaxine

Method of measurement

MIDAS (Migraine Disability Assessment) questioner

Secondary outcomes

empty

Intervention groups

1

Description

Intervention group: The recipient of venlafaxine capsules 37.5 mg daily along with sodium valproate 200 mg daily. The duration of this intervention is three months.

Category

Treatment - Drugs

2

Description

Intervention group: Recipient of miJroherb capsules (containing 50 mg of magnesium, 100 mg of feverfew, 150 mg of Matricaria chamomilla) produced by Barij Essence Company, which should be taken every 12 hours with plenty of water, and 200 mg sodium valproate tablets daily. The duration of this intervention is three months.
