The Effect of Organized Multi-Sensory Stimuli on the Quality of Life of the Elderly and Their Self-Efficacy in Coping with the Fall Efficacy

Protocol summary

Summary

Considering the growth of aging population in all societies, attention to improving the quality of health care and improving their quality of life is necessary. The purpose of this study was to provide non-pharmacological and low-risk strategies for improving the quality of life of the elderly, self-efficacy of fear of falling and their enjoyment of treatment and lifestyle modification. The present study is a pre-and post-semiotic study in order to investigate the effect of organized sensory stimuli on elderly people's quality of life and the international scale of self-efficacy of fear of falling in 4 intervention groups (the play of desired music of any elderly, showing images of nature and Family photos, scent of lavender oil and hand massage with almond oil) for 4 weeks, 3 sessions per week and 10 minutes each session, and the control group will be done before and after. The 60-year-olds entering the monempour health centers in Tabriz, with a health record at the center and criteria for absenteeism, will be more than three sessions.
