Effectiveness of Education Program on Morbidity Obese Patients Knowledge About Modifiable Risk Factors of non-Communicable Disease

Protocol summary

2023-11-19, 1402/08/28

Study aim

1. To determine the effectiveness of the education program on morbidity obese patients' knowledge about Modifiable risk factors of non-communicable disease. 2. To find out the relationship between morbidity obese patients' knowledge and their demographic characteristics.

Design

A pre-experimental design study (one group pre-posttest) was use to achieve the objectives of the study

Settings and conduct

The study was conducted in Baghdad Teaching Hospital

Participants/Inclusion and exclusion criteria

Inclusion Criteria of the Sample: 1. Patient with BMI > 30. 2. Adult patient (age > 18 years). 3. Male and female patients. 4. Patient score less than 60 in pretest (who have knowledge deficit) exclusion criteria 1. Patient with BMI > 30. 2. Patient score more than 60 in pretest

Intervention groups

(53) participant from Obesity and Therapeutic Nutrition Center at Baghdad Teaching Hospital in Medical City expose to education program

Main outcome variables

assess morbidity obese patients' knowledge about modifiable risk factors of non-communicable disease.

Health conditions studied

1

Description of health condition studied

Obesity is a growing public health epidemic in the united states. It is defined as the excessive accumulation of body fat that may be detrimental to health and exists when one's body mass index (BMI) is 30 or higher (WHO, 2016). Obesity is a national problem that has drawn a great deal of attention, as obesity leads to increased mortality and morbidity rates (chan & woo, 2010).
