Iranian Registry of Clinical Trials

01 Aug 2026

The effects of motivational interviewing focused on some principles of Hefz - Alsehe in Persian medicine on stress and quality of life of infertile women

Protocol summary

Study aim

Determining the effects of motivational interviewing focused on some principles of Hefz - Alsehe in Persian medicine on stress and quality of life of infertile women

Design

From all women who meet the inclusion criteria, 56 participants will be selected by convenient method and allocated to two control and intervention groups by stratified random method according to primary and secondary infertility in four-person blocks.

Settings and conduct

Sampling will be done in Ayatollah Mousavi Hospital Infertility Clinic. Firstly, 56 eligible women will be selected by convenience Method and then participants will be allocated to two control and intervention groups by stratified random method according to primary and secondary infertility in four-person blocks. Participants will complete the questionnaires as a self-report before the intervention, immediately after the sessions and three months after the last consultation.

Participants/Inclusion and exclusion criteria

Inclusion criteria: Having at least reading and writing literacy; informed participation of research participants; medical diagnosis of female factor infertility; age range from 20 to 40 years old; obtaining a stress score of 92 and above based on Newton's infertility stress questionnaire. Exclusion criteria: Male infertility factor; having a divorce case or marital dispute, A history of known mental illness; people who don't want to continue participating in the study or don't participate in more than one counseling session.

Intervention groups

The intervention group includes motivational counseling with the content of some principles of Hefz - Alsehe of Iranian medicine. Motivational interviewing sessions will be held individually during five weekly and face-to-face meetings. The maximum time of each session is 45

minutes.

Main outcome variables

Stress; quality of life

Sample size
Target sample size: **56**

Randomization (investigator's opinion)
Randomized

Randomization description
The sampling method will be convenient. The participants will be allocated to two control and intervention groups by stratified random method according to primary and secondary infertility in four-person blocks. The sample size in the two groups is 56 participants, so the allocation of participants in the intervention and control groups by random selection of 14 four-person blocks (50 people) will be done. The selection of each block will be done using random table numbers.

Title and more details about the data/document

After completion of the study, information on the main outcome will be shared.

When the data will become available and for how long

Starting the access period from 2024

To whom data/document is available

Data and documentation will be available to medical researchers.

Under which criteria data/document could be used

The data can be used to study, give a citation, create new ideas, and practically apply in medical centers.

From where data/document is obtainable

Email to feizymaede788@gmail.com

What processes are involved for a request to access data/document

The data will be provided to the applicant within one month after reviewing and confirming the request.
