Investigation of the effect of theory-based education on asthma control behaviors among women with asthma referred to Amir Al-Momenin Hospital in Arak

Protocol summary

Study aim

Determining the effect of theory-based training on asthma control behaviors in asthmatic women referred to Amirul Mominin Hospital in Arak

Design

The study population is 80 women with asthma, 40 of whom are randomly assigned to the intervention group and 40 to the control group.

Settings and conduct

This study is conducted in the city of Arak to educate women with asthma. In this study, it is a randomized controlled trial that is selected by simple random and placed in intervention and control groups.

Participants/Inclusion and exclusion criteria

1. A person suffering from asthma with a doctor's confirmation 2. Not suffering from other chronic diseases, such as chronic obstructive pulmonary disease (COPD), which includes chronic bronchitis, emphysema, and small airways disease. 3. Age 18 to 65 years 4. Not having communication problems such as deafness and being literate 5. Living in Arak for at least one year

Intervention groups

The desired training program is implemented in a combined way (direct training including group discussion, lectures, questions and answers, film showing and indirect training including distribution of pamphlets and educational booklets). Based on the needs assessment, the number of sessions and the method are determined. The training is based on the health belief model in the field of prevention of exposure to air pollution, medication compliance and dietary compliance in women with asthma for the intervention group.

Main outcome variables

The main outcome variable is performing asthma disease control behaviors (including medication adherence, avoiding exposure to air pollution, and following diet) in women with asthma.

Asthma

Primary outcomes

1

Description

Improving the ability of asthmatic women in asthma control behaviors

Timepoint

Before the intervention and three months after the intervention

Method of measurement

In this study, two questionnaires are used: 1- Asthma control questionnaire 2- Theory-based questionnaire to measure the effect of the educational program on the constructs of the health belief model

Secondary outcomes

empty

Intervention groups

1

Description

Intervention group: In this study, the group received the designed educational intervention test. The desired training program is implemented in a combined way (direct training including group discussion, lectures, questions and answers, film showing and indirect training including distribution of pamphlets and educational

booklets). Based on the needs assessment, the number of sessions and the method are determined. The training is based on the health belief model in the field of prevention of exposure to air pollution, medication compliance and dietary compliance in women with asthma for the intervention group.
