Comparison of therapeutic effects and monotherapy with lacosamide versus carbamazepine in children with newly diagnosed epilepsy

Protocol summary

Study aim

Comparison of therapeutic effect and monotherapy with lacosamide against carbamazepine in children with newly diagnosed epilepsy

Design

Clinical trial with 2 parallel groups, open-label, randomized, phase 3 on 100 patients. The random allocate software was used for randomization.

Settings and conduct

Children with newly diagnosed epilepsy who are hospitalized in Bu Ali Sina Hospital will be randomly divided into two groups A and B. Group A will receive lacosamide and group B will receive carbamazepine. Demographic information and clinical conditions of the patients will be recorded before entering the study, and then in the follow-up visits every three months, the two groups will be compared with each other in terms of recovery and complications.

Participants/Inclusion and exclusion criteria

The inclusion criteria of the study are children between the ages of 4 and 16 who have newly been diagnosed with epilepsy. exclusion criteria: 1. History of liver disease or heart disease 2. Receiving anti-seizure medication for more than 48 hours during the last three months 3. Patients with any neurodegenerative or neurometabolic disease 4. history of hypersensitivity reaction 5. Lack of consent of the patient and the patient's guardian 6. Patients with a history of bone marrow suppression

Intervention groups

Group A: Lacosamide Group B: carbamazepine

Main outcome variables

Primary outcome: at least a 6-month seizure-free period. Secondary outcome: drug side effects (aplastic anemia - agranulocytosis - liver dysfunction (increase of AST, ALT above 5 times the normal range) - hyponatremia (Na less than 135).

Scientific title

Comparison of therapeutic effects and monotherapy with lacosamide versus carbamazepine in children with newly diagnosed epilepsy		Name of ethics committee Research Ethics Committees of Mazandaran University of Medical Sciences	
Public title Investigation of therapeutic effect and monotherapy with lacosamide compared to carbamazepine in children with epilepsy		Street address Sari, Imam Square, Serah Joibar, Mazandaran University of Medical Sciences	
Purpose Treatment		City Sari	
Inclusion/Exclusion criteria Inclusion criteria: Children aged between 4 and 16 years with newly diagnosed epilepsy Exclusion criteria: History of liver disease and history of heart disease Receiving antiepileptic medication for more than 48 hours during the last three months Patients with any neurodegenerative or neurometabolic disease causing an allergic reaction Dissatisfaction of the patient and the patient's parents Patients with a history of bone marrow suppression		Province Mazandaran	
Age From 4 years old to 16 years old		Postal code ۴۸۱۵۷۳۳۹۷۱	
Gender Both		Approval date 2023-10-24, 1402/08/02	
Phase 3		Ethics committee reference number IR.MAZUMS.REC.1402.466	
Groups that have been masked - Participant - Data analyser		Health conditions studied 1 Description of health condition studied Epilepsy ICD-10 code G40 ICD-10 code description Epilepsy and recurrent seizures	
Sample size Target sample size: 100		Primary outcomes 1 Description At least a period of 6 months without seizures Timepoint For 6 months, the number and type of seizures experienced by the child from the previous visit will be asked Method of measurement Observing types of seizures by parents	
Randomization (investigator's opinion) N/A		Secondary outcomes 1 Description Drug side effects includes (aplastic anemia - agranulocytosis - liver disorder (increased AST, ALT more than 5 times the normal range) - hyponatremia (Na less than 135). Timepoint 6 months after drug intervention Method of measurement Observation of drug complications includes (aplastic anemia - agranulocytosis - liver dysfunction (increase of AST, ALT above 5 times the normal range) - hyponatremia (Na less than 135).	
Randomization description		Intervention groups	
Blinding (investigator's opinion) Double blinded			
Blinding description The method of blinding in this study will be as follows, so that at the beginning of the study, an envelope that has only one code on it is randomly given to them, and the type of treatment group is determined in the envelope, and the envelope is opened by the pharmacy and the drug is already It will be prepared and delivered to the patient.			
Placebo Not used			
Assignment Parallel			
Other design features			
Secondary Ids empty

1

Description

Intervention group: Lacosamide (Unimide brand) was started with a daily dose of 2 mg/kg/day divided into two doses (BD) and continued with an increase of 2 mg/kg/day every week to a maximum dose of 10 mg/kg/day if tolerated.

Category

Treatment - Drugs

2

Description

Intervention group: Carbamazepine (brand name Tegatard) with a dose of 5 mg/kg/day (BD) during the first week and with an increase of 5 mg/kg/day every week to a maximum dose of 20 mg/kg/day if tolerated.

Category

Treatment - Drugs
