

# Clinical Trial Protocol

## Iranian Registry of Clinical Trials

10 Jun 2026

### Comparison of the effect of tranexamic acid washing solution with gel foam impregnated with tranexamic acid (TXA) on the amount of bleeding time after wisdom tooth surgery in all healthy patients between 20 and 60 years old who require bilateral extraction of mandibular wisdom teeth

#### Protocol summary

##### Study aim

Determining the comparison of the effect of using a washing solution containing tranexamic acid with Gelfoam impregnated with tranexamic acid (TXA) on the amount of bleeding after wisdom tooth surgery.

##### Design

A clinical trial without a control group with parallel groups, randomized with randomization website, with a sample size of 42 healthy patients between 20 and 60 years old.

##### Settings and conduct

wisdom tooth surgery on one side of the mandible and silent tooth washing using tranexamic acid solution (10 cc 150 mg), then suturing and measuring the bleeding time (we put sterile gauze every one minute until its color turns pink and go down) Then wisdom tooth surgery on the other side and placing Gelfoam impregnated with tranexamic acid (10 cc 150 mg), then suturing and measuring the bleeding time (we put sterile gauze every one minute until the color turns pink and decreases) and Finally, these two methods are compared. On the 3rd, 7th, and 14th days after surgery, patients are examined for pain All samplings are done in the clinic of Jundishapur Dental School in Ahvaz

##### Participants/Inclusion and exclusion criteria

Healthy patients between 20 and 60 years old who have bilateral mandibular wisdom teeth

##### Intervention groups

First intervention: wisdom tooth surgery on one side of the mandible and silent tooth washing using a washing solution containing tranexamic acid (10 cc 150 mg) and measuring the bleeding time The second intervention: surgery on the opposite tooth of the same person and placing Gelfoam impregnated with tranexamic acid (10 cc 150 mg) and measuring the bleeding time

##### Main outcome variables

Bleeding time after wisdom tooth surgery Pain after surgery

#### General information

**Scientific title**  
Comparison of the effect of tranexamic acid washing solution with gel foam impregnated with tranexamic acid (TXA) on the amount of bleeding time after wisdom tooth surgery in all healthy patients between 20 and 60 years old who require bilateral extraction of mandibular wisdom teeth

**Public title**  
Comparison of the effect of tranexamic acid washing solution with gel foam impregnated with tranexamic acid (TXA) on the amount of bleeding time after wisdom tooth surgery

**Purpose**  
Prevention

**Inclusion/Exclusion criteria**

**Inclusion criteria:**

all healthy patients between 20 and 60 years old With bilateral mandibular wisdom teeth

**Exclusion criteria:**

Patients with underlying problems and diseases Patients with coagulation problems Non-committed and uncooperative patients Physically and mentally disabled patients

**Age**

From **20 years** old to **60 years** old

**Gender**

Both

**Phase**

N/A

**Groups that have been masked**

*No information*

**Sample size**

Target sample size: **42**

**Randomization (investigator's opinion)**

Not randomized

**Randomization description**

**Blinding (investigator's opinion)**

**Health conditions studied**

**1**

**Description of health condition studied**

Measuring the bleeding time after wisdom tooth surgery after using tranexamic acid in solution form and gelfoam impregnated with tranexamic acid in two separate sockets of mandibular wisdom teeth and comparing these two methods at the end and also measuring pain on days 3, 7 and 14 From surgeryCommunity Verified icon

**ICD-10 code**

**ICD-10 code description**

**Primary outcomes**

**1**

**Description**

bleeding time

**Timepoint**

Every minute after the intervention

**Method of measurement**

Using sterile gas and changing the color and amount of blood on it after every minute

**Secondary outcomes**

**1**

**Description**

Measurement of pain after surgery

**Timepoint**

Day 3, 7 and 14 after surgery

**Method of measurement**

using visual analogue scale

**Intervention groups**

**1**

**Description**

Intervention group: In all healthy patients between 20 and 60 years old. Washing one of the sockets of the

mandibular wisdom tooth after tooth extraction using a washing solution containing tranexamic acid (10 cc 150 mg). Placing gelfoam impregnated with tranexamic acid (150 mg) in another socket after tooth extraction.

**Category**

Prevention

**2****Description**

Intervention group: Intervention group: Gelfoam impregnated with tranexamic acid (10 cc 150 mg) is placed in the same patient as before and in another patient.

**Title and more details about the data/document**

All data is shareable after de-identifying individuals

**When the data will become available and for how long**

The access period starts 6 months after the results are published

**To whom data/document is available**

All interested people in various related fields can apply to receive them

**Under which criteria data/document could be used**

The analyzes that are going to be done have been done in line with the research

**From where data/document is obtainable**

By e-mail sakiarsalan@gmail.com

**What processes are involved for a request to access data/document**

Someone who is an expert and interested, along with a document, send a request via electronic mail, explaining the reason for the need for the data and what is to be done on the data, and the reason for the interest.

**Comments**
