

# Clinical Trial Protocol

## Iranian Registry of Clinical Trials

01 Jun 2026

### Comparative bioequivalence study of the extended release tamsulosin hydrochloride 0.4 mg tablet manufactured by Tasnim Company

#### Protocol summary

##### Study aim

Examining the bioequivalency of domestically produced extended release tamsulosin hydrochloride 0.4 mg formulations with brand samples(Omnice Ocas®)

##### Design

A single dose, not blinded, randomized, bioequivalence clinical trial on 24 healthy volunteers.

##### Settings and conduct

The number of 24 healthy in the age range of 18-55 years and the Body Mass Index range of 18-30, who are voluntarily selected through public notification. One tablet is taken fasting and blood is taken at 15 times point. One week later, the process is repeated for the brand medicine

##### Participants/Inclusion and exclusion criteria

The weight range of participating candidates should be between 60-100 kg; All candidates must be non-smokers; Candidates should be healthy in terms of physical examination, ECG and the following laboratory tests: Hemoglobin, Hematocrit, Red and White Blood Count, MCV (Mean Body Volume), MCH (Mean Body Hemoglobin), Routine Urinalysis, Total Cholesterol, Triglyceride, Total Proteins, albumin, uric acid, total bilirubin, alkaline phosphatase, gamma glutamyl transpeptidase ( $\gamma$ -GT), aspartate aminotransferase (AST), alanine aminotransferase (ALT), urea, creatinine and fasting blood glucose Volunteers who have agreed to an informed consent form.

##### Intervention groups

After taking a tamsulosin hydrochloride 0.4 mg from domestic company, 3 milliliters of blood will be collected from the volunteer in 16 times intervals for 48 hours. one week later, the process is repeated for a brand sample tablet. The drug concentration is measured in plasma

##### Main outcome variables

Studying the Drug pharmacokinetic parameters including measuring the plasma concentrations of drugs for brand and test products, determining the desired and important pharmacokinetic parameters in bioequivalence

studies, AUCs, Tmax, Cmax, T1/2

**Scientific title**  
Comparative bioequivalence study of the extended release tamsulosin hydrochloride 0.4 mg tablet manufactured by Tasnim Company

**Public title**  
Comparative bioequivalence study of the extended release tamsulosin hydrochloride 0.4 mg tablet manufactured by Tasnim Company

**Purpose**  
Other

**Inclusion/Exclusion criteria**  
**Inclusion criteria:**  
The weight range of participating candidates should be between 60-100 kg Candidates should be healthy in terms of physical examination, ECG and the following laboratory tests: Hemoglobin, Hematocrit, Red and White Blood Count, MCV (Mean Body Volume), MCH (Mean Body Hemoglobin), Routine Urinalysis, Total Cholesterol, Triglyceride, Total Proteins, albumin, uric acid, total bilirubin, alkaline phosphatase, gamma glutamyl transpeptidase (γ-GT), aspartate aminotransferase (AST), alanine aminotransferase (ALT), urea, creatinine and fasting blood glucose Volunteers who have agreed to an informed consent form All candidates should not consume caffeine-containing drinks and chocolate during two days before the prescription, and this restriction must be followed until the last blood draw  
**Exclusion criteria:**  
History of allergic or adverse reaction to tamsulosin or any similar product Volunteers with blood pressure less than 60/90 mm Hg or higher than 90/140 mm Hg Smokers Individuals who donated whole blood or blood components within 2 months within 2 weeks prior to the first dose of the study product(s)

**Age**  
From **18 years** old to **55 years** old

**Gender**  
Both

**Phase**  
Bioequivalence

**Groups that have been masked**  
*No information*

**Sample size**  
Target sample size: **24**

**Randomization (investigator's opinion)**  
Randomized

**Randomization description**  
To randomly assign people in two groups, 24 cards with numbers 1 to 24 will be used in closed envelopes that are arranged irregularly. Each candidate will pick up an envelope after entering the study, and numbers 1-12 will be in group A and numbers 13-24 will be in group B. Group A will receive intervention 1 and group B will receive intervention 2, and after the first period, the interventions of the both groups will change for the second period.

**Blinding (investigator's opinion)**

Not blinded

**Blinding description**  
**Placebo**  
Not used  
**Assignment**  
Crossover  
**Other design features**

## Health conditions studied

### 1

#### Description of health condition studied

Bioequivalence study in healthy volunteers

#### ICD-10 code

#### ICD-10 code description

## Primary outcomes

### 1

#### Description

Plasma concentration of the drug

#### Timepoint

16 sampling time included pre-dose (time 0) and at the following hours post-dose: 1, 2, 3, 3.5, 4, 4.5, 5, 5.5, 6, 6.5, 7, 8, 12, 24, and 48 h

#### Method of measurement

Liquid Chromatography with tandem mass spectrometry (LC-MS-MS)

## Secondary outcomes

empty

## Intervention groups

1

### Description

Intervention group: This study examines the bioequivalence of the extended release tamsulosin hydrochloride produced by a domestic company with a foreign brand sample. We have only one intervention group and there is no control group. The intervention group, which includes healthy, fasting volunteers, will receive a single dose, 0.4 mg tablet manufactured by the pharmaceutical company Tasnim and Omnic Ocas® brand, in two 48-hour periods with an interval of one week, on the day of the study. And in 16 different time periods up to 48 hours after taking the medicine, blood samples will be taken from the volunteers in the amount of 3 ml each time, that is, a total of 48 ml within 48 hours. The training that will be given to the volunteers includes avoiding the consumption of drinks containing alcohol and xanthine and other interfering drugs in the prescription drug from 48 hours before the start of the study until the end of the study.
