Investigating in vivo fasted state bioequivalence of Celecoxib 200 mg capsule compared to innovator product

Protocol summary

Study aim
In vivo bioequivalence study of Celecoxib 200 mg capsule

Design
The clinical trial has control and test groups with crossover, randomized design, without blinding. Twenty-four healthy volunteers will participate randomly in the study as two twelve-person study groups. Each volunteer will receive a single dose of drug in two periods. In one period the test formulation and in another period the reference formulation. Therefore, each volunteer will be his own "Control". To randomly assign participants in two groups, the lottery method will be used.

Settings and conduct
After oral administration of 200 mg capsule to volunteer, the blood samples will be collected in predetermined time intervals up to 48 hours. The samples will be stored in freezer -4 degrees centigrade until analysis and sample quantitation. The concentration of drug in blood samples will be measured by liquid chromatography. The study will be performed in Faculty of Pharmacy, Tabriz University of Medical Sciences.

Participants/Inclusion and exclusion criteria
Inclusion criteria: General Health (in terms of Liver, Heart and Kidney), Age (18-59 years old) Exclusion criteria: Smoking, History of cardiovascular, liver and kidney disease, Pregnancy, Alcohol and drug addiction, History of drug allergy.

Intervention groups
Intervention group will receive a single oral dose of test drug product (Celecoxib 200 mg capsule manufactured by Fizer) and Control group will receive a single dose of reference drug product (Celecoxib 200 mg capsule manufactured in Fizer). Blood samples will be taken for 48 hours at the mentioned time points after drug administration and the plasma will be stored in freezer until analysis. In both groups, breakfast and lunch will be served two and six hours after drug administration, respectively.

Main outcome variables
Drug plasma concentration

Scientific title
Investigating in vivo fasted state bioequivalence of Celecoxib 200 mg capsule compared to innovator product

Public title
Bioequivalence study of Celecoxib 200 mg capsule

Purpose
Other

Inclusion/Exclusion criteria

Inclusion criteria:
General Health (in terms of Liver, Heart and Kidney) Age (18-59 years)

Exclusion criteria:
Smoking History of cardiovascular disease, liver and kidney disease Pregnancy Alcohol and drug addiction History of drug allergy

Age
From **18 years** old to **59 years** old

Gender
Both

Phase
Bioequivalence

Groups that have been masked
No information

Sample size
Target sample size: **24**

Randomization (investigator's opinion)
Randomized

Randomization description
To randomly assign participants in two groups, 24 cards with numbers 1 to 24 will be used in closed envelopes that are arranged irregularly. Each candidate will pick up an envelope. Numbers 1-12 will be in group A and numbers 13-24 will be in group B. Group A will receive intervention 1 and group B will receive intervention 2, and after the first period, the interventions of both groups will change for the second period.

Blinding (investigator's opinion)
Not blinded

Health conditions studied

1

Description of health condition studied
In the present study, the products will be administered to healthy volunteers

ICD-10 code

ICD-10 code description

Primary outcomes

1

Description
Plasma concentration of drug

Timepoint
0.5-48 hours in predetermined time intervals after drug administration

Method of measurement
HPLC (High performance liquid chromatography)

Secondary outcomes

empty

Intervention groups

1

Description
Intervention group: Intervention group will receive a single oral dose of test product (Celecoxib 200 mg capsule manufactured by Hakim) in fasted state. Blood samples will be collected for 48 hours at the mentioned times after drug administration and the concentration of drug in blood samples will be stored in freezer until analysis. Breakfast and lunch will be served two and six hours after drug administration, respectively

Category
Treatment - Drugs

2

Description
Control group: Control group will receive a single oral dose of reference product (Celecoxib 200 mg capsule manufactured by Fizer) in fasted state. Blood samples

will be collected for 48 hours at the mentioned times after drug administration and the concentration of drug in blood samples will be stored in freezer until analysis. Breakfast and lunch will be served two and six hours after drug administration, respectively.
