In vivo Bioequivalence study of Hydrochlorothiazide 25 mg tablet manufactured by AaniDarman Pharmaceutical Co. Compared to innovator Product

Protocol summary

Study aim

In vivo fasted-state bioequivalence study of Hydrochlorothiazide 25 mg tablet

Design

The clinical trial has control and test groups with crossover, randomized design, without blinding. 24 healthy male volunteers will participate randomly in the study as two twelve-person groups. Each volunteer will receive a single dose in two periods. . Therefore, each volunteer will be his own "Control". To randomly assign participants in two groups, the lottery method will be used.

Settings and conduct

After oral administration of one 25 mg tablet to volunteer, the blood samples will be collected in predetermined time intervals up to 48 hours. The samples will be stored in freezer -4 degrees centigrade until analysis. The concentration of drug in blood samples will be measured by liquid chromatography. The study will be performed in Tabriz University of Medical Sciences.

Participants/Inclusion and exclusion criteria

Inclusion criteria: General Health (in terms of Liver, Heart and Kidney diseases), Age (18-59 years old) Exclusion criteria: Smoking, History of cardiovascular disease, liver and kidney disease, Pregnancy, Alcohol and drug addiction, History of drug allergy

Intervention groups

Intervention group are healthy volunteers that will receive a single oral dose of test product (Hydrochlorothiazide tablet manufactured by AaniDarman, Iran) in the first phase of the study and Control group are also healthy volunteers that will receive a single dose of reference product (Hydrochlorothiazide tablet manufactured by Bayer, Germany) in the first phase of the study. Since the design of the study is cross-over, in the second series of

drug administration, the intervention and control groups are switched. Blood samples will be taken for 48 hours and the plasma will be stored in freezer until analysis.

Main outcome variables

Drug plasma concentration

Purpose

Other

Inclusion/Exclusion criteria**Inclusion criteria:**

General Health (in terms of Liver, Heart and Kidney diseases) Age between 18 to 59 years

Exclusion criteria:

Smoking History of cardiovascular, liver, and kidney disease Pregnancy Alcohol and drug addiction History of drug allergy

Age

From **18 years** old to **59 years** old

Gender

Both

Phase

Bioequivalence

Groups that have been masked

No information

Sample size

Target sample size: **24**

Randomization (investigator's opinion)

Randomized

Randomization description

To randomly assign participants in two groups, 24 cards with numbers 1 to 24 will be used in closed envelopes that are arranged irregularly. Each candidate will pick up an envelope. Numbers 1-12 will be in group A and numbers 13-24 will be in group B. Group A will receive intervention 1 and group B will receive intervention 2, and after the first period, the interventions of both groups will change for the second period.

Blinding (investigator's opinion)

Intervention groups**1****Description**

Intervention group: Intervention group will receive a single oral dose of test product (Hydrochlorothiazide 25 mg sachet manufactured by AaniDarman Co., Iran) in fasted state. Blood samples will be collected for 48 hours at the mentioned times after drug administration and the concentration of drug in blood samples will be stored in freezer until analysis. Breakfast and lunch will be served two and six hours after drug administration, respectively. After washout period, volunteers receive the reference drug and the same process is performed.

Description

Control group: Control group will receive a single oral dose of reference product (Hydrochlorothiazide 25 mg tablet manufactured in France) in fasted state. Blood samples will be collected for 48 hours at the mentioned times after drug administration and the concentration of drug in blood samples will be stored in freezer until analysis. Breakfast and lunch will be served two and six hours after drug administration, respectively. After washout period, volunteers receive the reference drug and the same process is performed.
