

Clinical Trial Protocol

Iranian Registry of Clinical Trials

07 Jul 2026

Comparison of the effectiveness of Azathioprine and placebo on lung volumes, exacerbations and severity of asthma in severe asthmatic patients

Protocol summary

Study aim

Azathioprine effect on improvement of lung function, asthma severity and exacerbation in severe asthmatic patients, before and after treatment with azathioprine

Design

A controlled, parallel-group, double-blind, randomized, phase 3 clinical trial on 40 patients. The table of random numbers generated by the calculator is used for randomization.

Settings and conduct

Study population: 40 patients with asthma will be entered based on history and spirometry whose symptoms were uncontrolled despite primary treatments; Location of study: Patients will be selected from among the patients referred to the pulmonary clinic of Imam Khomeini Hospital or those referred to the personal office of university professors in Ahvaz; Blinding type: double blinded - patient and researcher; How to blind: All medicines are placed in similar and dark-colored packages, a numerical label is placed on the medicine box. Only the pharmacist is aware of the number assigned to the relevant group. Then, in order from number 1 to 40, the package of drugs is given to the researcher to prescribe to the patients.

Participants/Inclusion and exclusion criteria

Inclusion criteria: Patients with severe asthma whose symptoms have not improved with usual treatments; Non-inclusion criteria: pregnancy, breastfeeding, advanced liver failure or liver enzymes disorders, advanced renal failure, cytopenia, moderate to severe anemia

Intervention groups

Intervention group: patients receiving azathioprine 2mg/kg daily; Control group: patients receiving placebo.

Main outcome variables

Lung volume (forced expiratory volume in 1 second; Forced vital capacity; Forced expiratory flow at 25-75%

of the pulmonary volume); Forced expiratory volume in 1 second to Forced vital capacity ratio; Quality of life in asthmatic patients score; The distance covered in the 6-minute walk test

Scientific title
Comparison of the effectiveness of Azathioprine and placebo on lung volumes, exacerbations and severity of asthma in severe asthmatic patients

Public title
Azathioprine effect in severe asthmatic patients

Purpose
Treatment

Inclusion/Exclusion criteria

Inclusion criteria:

Severe asthmatic patients (FEV1<60) diagnosed by pulmonologist No improvement in symptoms with usual treatments for asthma including Prednisolone 5mg/day, High dose inhaled corticosteroid, Long acting beta agonist and Long acting muscarinic antagonist

Exclusion criteria:

Advanced liver failure Advanced renal failure Pregnancy Breastfeeding Cytopenia Moderate to severe anemia Known allergy to azathioprine Concomitant treatment with: Allopurinol, Febuxostat, Adalimumab, Anakinra Elevated liver enzymes (aminasemia)

Age
From **18 years** old to **75 years** old

Gender
Both

Phase
3

Groups that have been masked

- Participant
- Investigator

Sample size
Target sample size: **40**

Randomization (investigator's opinion)
Randomized

Randomization description
Using a calculator, random numbers from 1 to 40 are generated, 20 numbers and the first number generated by the calculator are assigned to the intervention group and the next 20 numbers to the control group, then the package of medicines is in the order of number 1 to 40 will be given to the researcher to administer to the patients.

Blinding (investigator's opinion)
Double blinded

Blinding description
The study is double-blind, so that both the researcher and the participant do not know about the type of intervention (drug or placebo). All medicines are placed in similar and dark-colored packages, a numerical label is placed on the medicine box. Only the pharmacist is aware of the number assigned to the relevant group. Then, in order from number 1 to 40, the package of drugs is given to the researcher to prescribe to the patients.

Health conditions studied

1

Description of health condition studied

Asthma

ICD-10 code

J45.5

ICD-10 code description

Severe persistent asthma

Primary outcomes

1

Description

Mean forced expiratory volume in second 1

Timepoint

Before intervention and three months after intervention

Method of measurement

Spirometry

2

Description

Mean Forced Vital Capacity (FVC)

Timepoint

Before intervention and three months after intervention

Method of measurement

Spirometry

3

Description

Mean forced expiratory flow at 25–75% of forced vital capacity

Timepoint

Before intervention and three months after intervention

Method of measurement

Spirometry

4

Description

Mean asthma related questionnaire score

Timepoint

Before intervention and three months after intervention

Method of measurement

Asthma related questionnaire GSK 2002

5

Description

The number of exacerbations

Timepoint

before intervention and three months after intervention

Method of measurement

History taking

6

Description

Distance traveled in the 6-minute walking test

Timepoint

Before intervention and 3 months after intervention

Method of measurement

6-minute walk test

7

Description

Relative frequency of asthma recovery based on the forced expiratory volume in 1 second

Timepoint

At the end of the study

Method of measurement

Spirometer

Secondary outcomes

empty

Intervention groups

1

Description

Intervention group: Azathioprine, 2mg/kg daily tablets for 3 months, made in Ramopharmin pharmaceutical company

Category

Treatment - Drugs

2

Description

Control group: Placebo, with the same size and shape as azathioprine Produced in the central laboratory of Jundishapur University Faculty of Pharmacy, Ahvaz

Category

Placebo

Title and more details about the data/document

Demographic information of patients and paraclinical findings of patients in the form of patient code will be provided to other researchers in an unidentifiable manner.

When the data will become available and for how long

The access period starts 6 months after the results are published

To whom data/document is available

Other researchers who intend to conduct similar studies with a similar theme and topic

Under which criteria data/document could be used

To conduct studies with a similar theme and topic

From where data/document is obtainable

To get information, they can go to the office of the internal department of Imam Khomeini Hospital in Ahvaz, located on Azadegan Blvd.

What processes are involved for a request to access data/document

After submitting a written request for data request to the internal group office in Imam Khomeini Hospital of Ahvaz and validating the request through the group office, the data will be provided to the researcher after about two weeks.
