A Study on the Effectiveness of Training based on Positive Mindset on High School Students' Social Relationship Skills and Anxiety Disorders in Zahedan city in 2023

Protocol summary

Study aim

Investigating the effect of positive thinking training on social communication skills and anxiety disorders

Design

The participants in this study include second grade high school students in Zahedan city. The participants are randomly selected and randomly divided into two groups by tossing a coin. The total number of participants will be 30 students (15 people in each group).

Settings and conduct

This research is conducted on the effect of positive thinking training on social communication skills and anxiety disorders. The place of study is second term high schools in Zahedan city. Therapy sessions are held in the school of vision. Meetings are held in groups and during 9 two-hour sessions. The first session is the introduction of group members, and the second and third sessions include identifying and strengthening strengths and positive emotions. In the fourth and fifth sessions, forgiveness and forgiveness, in the sixth and seventh sessions, gratitude and appreciation, in the eighth session, positive communication in providing well-being and active constructive feedback, and in the ninth session, gradual and continuous pleasure is taught. Positive psychotherapy (PPT) program is used in the intervention sessions. The positive thinking, social connection and anxiety level before and after the intervention are compared. Beck's anxiety questionnaire (1995) is used.

Participants/Inclusion and exclusion criteria

The students of the second grade of secondary school in one district of Zahedan city, who are both boys and girls according to their age and education level

Intervention groups

The participants in this study are divided into two groups (study and control). The study group will receive positive thinking training. The control group will not receive this

training but will participate in regular school activities.

Main outcome variables

Positive thinking, Social communication, Anxiety

Scientific title

A Study on the Effectiveness of Training based on Positive Mindset on High School Students' Social Relationship Skills and Anxiety Disorders in Zahedan city in 2023

Public title

A Study on the Effectiveness of Training based on Positive Mindset on Social Relationship Skills and Anxiety Disorders

Purpose

Education/Guidance

Inclusion/Exclusion criteria**Inclusion criteria:**

Students of the second grade of high school in district one of Zahedan city

Exclusion criteria:

Students who are in the second year of high school and do not fall into the age range between 15 and 18 years old

Age

From **15 years** old to **18 years** old

Gender

Both

Phase

3

Groups that have been masked

No information

Sample size

Target sample size: **30**

More than 1 sample in each individual

Number of samples in each individual: **15**

A student of the second grade of secondary school in District 1 of Zahedan city

Randomization (investigator's opinion)

Randomized

Randomization description

Randomization is simple and is done using the coin toss method. We consider the control group as a lion and the experimental group as a line, and based on the sample size of 15 people for each group, a coin is tossed 30 times and people are randomly assigned to two groups.

Blinding (investigator's opinion)

Not blinded

Health conditions studied**1****Description of health condition studied**

Teaching positive thinking

ICD-10 code**ICD-10 code description****Primary outcomes****1****Description**

Social communication skills

Timepoint

Before the start of the intervention, the questionnaire is given to the students who were selected, and after completing it and being evaluated according to the results obtained and the level of the students, training to the students and recommendations to the parents of the school are given. and after these trainings and immediately after the intervention, the questionnaire will be given to the intervention group again.

Method of measurement

Social Communication Skills Inderbitzen and Foster (1992) Social Communication Skills Questionnaire contains 39 statements with 5 options where the subject expresses her answer for each statement in a range of options from not at all to always true.

2**Description**

Anxiety disorders

Timepoint

Before the start of the intervention, the questionnaire is given to the students who were selected, and after completing it and being evaluated according to the results obtained and the level of the students, training to the students and recommendations to the parents of the school are given. and after these trainings and immediately after the intervention, the questionnaire will be given to the intervention group again.

Method of measurement

Beck's anxiety questionnaire (1995) is used. This anxiety questionnaire contains 21 questions and according to the Likert scale (zero to three scores for each question), a higher score indicates more anxiety.

Secondary outcomes

empty

Intervention groups

1

Description

Intervention group (study): The study group will consist of second grade high school students of district one of Zahedan city. Students are randomly selected from schools in the city. This group will participate in regular and scheduled training sessions on a weekly basis for a specified period of time (8 weeks). A group form positive psychotherapy program (Rashid and Seligman, 2013) is used to conduct positive psychotherapy sessions. This program is held in groups and during nine two-hour sessions. The data collected from the questionnaire (Beck's Anxiety Questionnaire) is evaluated to measure the changes in the variables of positive thinking, social communication skills and their anxiety level.

Category

Behavior

2

Description

Control group: The control group will also consist of second grade high school students of district one of Zahedan city. This group will not receive the positive thinking educational intervention but will participate in regular school activities. The control group before and after the study, similar to the study group, will be monitored and evaluated to measure any natural changes in the variables of positivity, social communication skills, and anxiety levels.
