

Clinical Trial Protocol

Iranian Registry of Clinical Trials

02 Aug 2026

Investigating the effect of remote health education on general health, sleep quality and resilience of mothers of children with autism

Protocol summary

Study aim

The purpose of the study is to determine the effect of remote health education on general health, sleep disorders and resilience of mothers of children with autism referred to autism centers in Shiraz.

Design

The clinical trial with control and intervention groups; with parallel design; double-blind; on 80 people; randomized by simple lottery method.

Settings and conduct

This research is conducted in Tabsem and Mehrandish Center of Shiraz. The studied population is mothers with children with autism. This study is double-blind because the mothers do not know which one is in the control group and which one is in the intervention group. Also, the person who analyzes the data does not know who is in the intervention and control group.

Participants/Inclusion and exclusion criteria

Inclusion criteria: Consent to participate in the research; having an autism disorder for the child that has been approved by a psychiatrist; having the ability to read and write; having a smartphone and the ability to use communication software ; the ability to use virtual education. Exclusion criteria: passing a similar training program; suffering from acute and chronic problems and mental disorders that prevent participation in training sessions; moving to another city.

Intervention groups

Intervention group: For the intervention group, 9 online sessions of 60 minutes will be held twice a week. Control group: No intervention is done for the control group, and at the end of the study, electronic content is provided to them

Main outcome variables

General health, Sleep quality and Resilience In mothers with autistic children

Sample size

Target sample size: **80**

Randomization (investigator's opinion)

Randomized

Randomization description

Two centers are selected under the direct supervision of the welfare of the Statistical Society by a simple lottery method (in this way, the name of each center is written separately in the middle of the note sheet and folded on both sides. One University professors are asked to choose one of the leaves) the name of the center chosen as the first center in the lottery is allocated as the intervention group and the other center is allocated as the control group.

Blinding (investigator's opinion)

Double blinded

Blinding description

Because the questionnaire is given to all participants, no one knows that they are in the control and intervention groups. The person analyzing the data also does not know who is in the intervention and control group

Health conditions studied

1

Description of health condition studied

The subject of study is not a disease

ICD-10 code

ICD-10 code description

Primary outcomes

1

Description

General health score in Goldberg and Hiller general health questionnaire

Timepoint

Before the start of the intervention - immediately after the intervention - 2 months after the intervention

Method of measurement

Goldberg and Hiller general health questionnaire

2

Description

Sleep quality score in the Pittsburgh Sleep Quality Questionnaire

Timepoint

Before the start of the intervention - immediately after the intervention - 2 months after the intervention

Method of measurement

Pittsburgh Sleep Quality Questionnaire

3

Description

Resilience score in Kenner and Davidson's resilience questionnaire

Timepoint

Before the start of the intervention - immediately after the intervention - 2 months after the intervention

Method of measurement
Kenner and Davidson's resilience questionnaire

Secondary outcomes

empty

Intervention groups

1

Description

Intervention group: For the intervention group, 9 online sessions of 60 minutes will be held twice a week. Topics include: two sleep hygiene sessions; three sessions of resilience and ways to create it; other sessions of self-awareness skills; empathy skills; self-expression skills; Problem solving skills

Category

Rehabilitation

2

Description

Control group: No intervention is done for the control group and electronic content is provided to them at the end of the study.
