The effectiveness of laughter yoga training on the quality and life expectancy of elderly people living in nursing homes

Protocol summary

Study aim

Determining the effectiveness of laughter yoga training on the quality and life expectancy of elderly people living in nursing homes in Shirvan city

Design

Randomized, unblinded, randomized clinical trial on 40 elderly people using a table of random numbers for randomization.

Settings and conduct

12 laughter yoga sessions for 100 minutes are performed on 20 elderly people in two nursing homes in Shirvan city, which are selected using a table of random numbers. In this study, only the elderly people do not know their group.

Participants/Inclusion and exclusion criteria

Entry criteria: Completion of the informed consent form, the elderly must be residents of Shirvan nursing homes - the birth certificate age of the person is over 60 years old - without severe and chronic physical and mental illness based on the medical record - able to communicate with others - free of disorders Hearing and speech impair communication - no dementia or severe disability Exclusion criteria: Participating in Laughter Yoga sessions in advance - Severe memory loss - Dissatisfaction in participating in Laughter Yoga training sessions, must not be a resident of an old people's home, must not be a resident of Shirvan city

Intervention groups

Completing Schneider's life expectancy and Lipad quality of life questionnaires in both intervention and control groups, teaching laughter yoga to the elderly participating in the intervention group

Main outcome variables

Significant change in the score of life expectancy and quality of life in the elderly in the intervention group

General information

Reason for update

Changing the study location from the Bojnurd nursing home to Shirvan.

Groups that have been masked
No information

Sample size
Target sample size: **40**

Randomization (investigator's opinion)
Randomized

Randomization description
People will be randomly divided into two control groups (20 people) and intervention group (20 people). In this way, closed envelopes will be used for random allocation. Participants choose one envelope from among the 40 envelopes in the box, 20 of which contain the "A" card and the other 20 envelopes contain the "B" card. If they take the "A" card, they will be in the intervention group, and if they take the "B" card, they will be in the control group

Blinding (investigator's opinion)
Not blinded
