Iranian Registry of Clinical Trials

03 Jul 2026

Effectiveness comparison of the Couple CARE (Couple Commitment and Relationship Enhancement) program versus flourishing model PERMA (Positive Emotion, Engagement, Relationships, Meaning, and Accomplishments) in an online method on the quality of the relationship, the relationship of the couple in the disease and the desire to have children again in high-risk pregnancy

Protocol summary

Study aim

Comparing the effectiveness of the Couple CARE program with the PERMA model on the quality of the relationship, the couple's relationship in illness, and the desire to have children again in high-risk pregnancy

Design

Randomized Controlled Trial in parallel with the control group, random allocation by permutation block method and random concealment, the sample size of 36 couples in each intervention group (total sample size of 72 couples), without blinding

Settings and conduct

The researcher goes to Shahid Sadouqi and Shahada Kargar Hospital in Yazd city and selects the samples according to available methods. Then the samples are invited and informed consent is obtained. The samples will be randomly assigned to two intervention groups of the Couple CARE program or the PERMA model. The second researcher carries out the psychological intervention under the supervision of the first, third, and fourth researchers.

Participants/Inclusion and exclusion criteria

Married pregnant women with a live fetus from the beginning of pregnancy to 28 weeks with a doctor's diagnosis of high-risk pregnancy Having a high-risk pregnancy record For couples, the ability to participate in online counseling sessions Having an Android or iOS smartphone Farsi dialect Consent to participate in research Unfavorable score of couple's relationship in illness and having marital relationship

Intervention groups

The first intervention group will receive the PERMA program in a 90-minute online session once a week for 6

consecutive weeks. The second intervention group (control) will receive the Couple CARE program in a 90-minute online session once a week for 6 consecutive weeks.

Main outcome variables

Relationship quality, the couple's relationship in illness, and desire to have children again

Randomization (investigator's opinion)

Randomized

Randomization description

Eligible couples, referring to Shahid Sadouqi Hospital and Shohada Kargar Hospital in Yazd city, are sampled based on the criteria of participating in the study using the

available method. The permutation block method obtains the randomization sequence, considering blocks of size 4, using the site www.random.org/sequences. Couples are allocated to two intervention groups the Care Program for Couples (CARE) or the PERMA model (PERMA). They are randomly selected (each group has 36 participants). Concealment is done in random allocation so that neither the researcher nor the women nor their spouses know which of the two groups they will be allocated to.

Description of health condition studied

High-risk pregnancy

ICD-10 code

O09

ICD-10 code description

Supervision of high risk pregnancy

Primary outcomes

1

Description

The quality of the couple's relationship

Timepoint

Baseline, completion of the intervention in week 6 and completion of the study in week 10

Method of measurement

Questionnaire of the quality of couple relations by Kennedy et al. (2016)

Secondary outcomes

1

Description

Couple relationship in illness

Timepoint

Baseline, completion of the intervention in week 6 and completion of the study in week 10

Method of measurement

Couple Relationship Scale Questionnaire in Illness

2

Description

The desire to have children again

Timepoint

Baseline, completion of the intervention in week 6 and completion of the study in week 10

Method of measurement

With a question on a visual scale between 1-10, "How willing are you to have children again?"

Intervention groups

1

Description

Intervention group: The intervention is carried out by a senior counseling student in midwifery who has the certificate and skill to perform the intervention under the supervision of the supervisor (reproductive health specialist and clinical psychologist) and the consultant professor (doctorate in nursing). The intervention for the couple is done online in the space of one of the Iranian messengers as a group in 6 sessions of 90 minutes, once a week. The intervention in the first group (PERMA model) includes an introduction of PERMA elements, the first element of PERMA is positive emotions and their role in life, the second element of PERMA is fascination and methods of increasing immersion, the third element of PERMA is meaning and connection with well-being, the fourth element of PERMA is positive relationships and evaluation of the quality of communication, the fifth element of PERMA is achievement/success and its importance in life. Then, the conclusion includes the summation and post-test implementation. For this group, before the start of the intervention, the link to the online counseling sessions in Skyroom will be sent along with the training video on how to use Skyroom and how to complete the questionnaires in the Iranian messenger group. Also, on the day of the meetings, they will be reminded again by sending an SMS about the start of the meetings along with the link related to the meetings. At the beginning of each meeting, a summary of the

materials related to the previous meetings will be reviewed and the assigned tasks related to the previous meeting will be reviewed by the consultant to measure the improvement of the relationship in each meeting. Couples are asked to participate in online counseling discussions and ask questions. The consultant will also ask questions about the topics of the meeting for the participation of more people. Women are asked to share what they learned in the sessions with their husbands and do the exercises with their participation. In case of absence from the video counseling session, the counseling session will be available to the absent person offline. In case of internet interruption or problems in the online holding system, counseling sessions will be held on another day with the coordination of group members. At the end of each session, a summary of the important topics discussed is presented people's questions are answered, and women are asked to do home exercises until the next session.
