Effect of Acupressure Technique and Diaphragmatic Breathing Exercise on Nausea and Vomiting in Cholecystectomy Patient: A comparative study

Protocol summary

Study aim

To Compare the Effectiveness of Acupressure Technique and Diaphragmatic Breathing Exercise on Nausea and Vomiting in Cholecystectomy Patients. .

Design

A Quasi Experimental Comparative Design on non random in patient with cholecystectomy with minimum sample size of 30 for each group will be used ; the total size 90 patient enrolled between December 2023 to September 2024

Settings and conduct

The study was conducted in Imam Al-Hussein medical city Hospital For Surgical unit For Cholecystectomy patient in Karbala Governorate, Iraq.

Participants/Inclusion and exclusion criteria

Inclusion criteria: All patient with cholecystectomy who have nausea and vomiting. More than 18 years old patient who complete surgery of cholecystectomy during the first 6 hour of surgery. Exclusion criteria: patient who declined to enroll in the study. patient with physical disability. patient who has amputation in upper extremity. Patient who has discontinuing to intervention. patient who had on mechanical ventilation and/or in intensive care for more than 48 hours.

Intervention groups

Data will be collected using the pre- and post-test methods. After assessing the level of nausea and vomiting, the sample will be allocated into three groups: (Group 1) performed the acupressure technique on PC6 using elastic wrist bands with a 1 cm-diameter plastic button stud for 6 hours. Group 2: diaphragmatic breathing exercise, for 6 hours. The researcher assesses the severity of nausea and vomiting after six hours to determine the effect of this exercise on both nausea and vomiting. All groups were evaluated prior to the intervention (post-test assessment) after six hours by using the Rhodes index to assess nausea. Group 3: control group without any intervention.

Main outcome variables

Reducing Nausea and Vomiting .

Health conditions studied**1****Description of health condition studied**

Cholecystectomy patient

ICD-10 code

R11

ICD-10 code description

Nausea and Vomiting

Primary outcomes**1****Description**

The primary outcome variable is the level of nausea and vomiting post operative in patient cholecystectomy that can be changed based on Acupressure Technique and diaphragmatic breathing exercises.

Timepoint

Before intervention and 6 hours after intervention.

Method of measurement

The Rhodes index and visual analog scale will be used to assess the level of nausea vomiting

Secondary outcomes

empty

Intervention groups**1****Description**

Intervention group: group1 perform the acupressure technique on pc6 with wrist band were used for this technique which are elastic wrist bands with plastic button 1cm in diameter stud ,The Stud of the wrist band pressing upon PC6acupoint it is located on the anterior surface of the forearm ,about three finger 'width up from the wrist crease ,between the tendon of the palmaris longus and flexior carpi radialis The patient wearing wrist bands at pc6 bilaterally starting at 0 hour postoperative and Removed for 6 hours .Group 2 Diaphragmatic

Breathing Exercise starting through inhale the nose slowly to take as much as possible amount of air ,while the mouth was closed and keep it on for few second paying close attention to the abdomen-hand movement with each breath while keeping the hand on the chest steady and then exhale slowly through the mouth for a few seconds in a circle shape, The patient in this group were instructed to perform diaphragmatic breathing exercise for 2-3 min every two hour for 6 hours , in all groups were evaluated prior to the intervention (post-test assessment) after six hours by using the Rhodes index and visual analog scale for assess nausea and vomiting level.

Category

Treatment - Other

2

Description

Control group received no intervention ;instead they received pretest and post test assessment after 6 hours ,as did the other groups ,and they will be compared to the other groups in the study. Then patients in all groups were evaluated prior to the intervention (post-test assessment) after 6 hours by using the Rhodes index and Visual Analog Scale .

Title and more details about the data/document

The data will be the result of Cholecystectomy Patient with Nausea and Vomiting Level in Both the Control and Intervention Groups .

When the data will become available and for how long

God Willing, Once the Article is Published, The Data will be Available after 6 Months of Publication. If the Article will be Published in a Subscribed Journal, The Data Will be Available after One Year because of the Policy of The Subscribed Journals.

To whom data/document is available

With Academic Nurses and any Researcher who is Interested in the Data.

Under which criteria data/document could be used

The Data Could be Used after Getting permission Via Email. Also, Users need to Acknowledge The Owner.

From where data/document is obtainable

Users can Ask for the Data and Permission via email. is the Corresponding Author. He will contact whoever he requests the information from.
