Protocol summary

Study aim

Bioequivalence study of Empagliflozin/Metformin 12.5/1000 mg (EMZIP® 12.5/1000 mg) manufactured by Faran pharmed versus originator brand SYNJARDY® 12.5/1000 mg manufactured by Boehringer in fasting condition in healthy volunteers.

Design

Bioequivalence study, crossover, single-blinded, 24 healthy volunteers. Simple randomization was used for randomization

Settings and conduct

The study is a single-blinded (Volunteers), cross-over and fasting, and on two series of healthy volunteers. The study will be done in two periods (48h). The interval between these two periods is a week. In the first round of the study, the candidates were divided into two groups the first group received a test tablet and the second group received a brand tablet. In the second round, the first group received a brand tablet and the second group received a test tablet. The blood samples are collected immediately before and after drug administration by volunteers. Then, drug extraction is done and samples are ready for analysis. Sampling is performed in Radin laboratory in Tabriz.

Randomization (investigator's opinion)
Randomized

Randomization description
People in the mentioned age group are invited to
participate through the advertisement. People are then
checked for health and healthy volunteers are identified.
People are randomly placed in one of the two study
groups with the help of a random number table and
receive the intervention related to the same group. The
volunteers don't have any information about taking the
test drug or brand drug

Blinding (investigator's opinion)
Single blinded

Blinding description
This study is a single-blinded clinical trial (volunteers).
Test and Originator brand's medicine are removed from
their packaging by the executor and placed in similar

and coded cans. Volunteers will not be informed about
receiving the brand or test dosage form.
