Evaluation of ice therapy as a pretreatment on reduction of injection pain and bleeding during periodontal surgery of maxilla after administration of prilocaine as a local anesthesia.

Protocol summary

Summary

The aim of this study was to determine the effect of pretreatment with ice on reducing pain during injection and bleeding during periodontal surgery after administration of prilocaine(without vasoconstrictors) as a local anesthetic in maxillary periodontal surgery. Inclusion criteria: no history of systemic diseases especially hemorrhagic disorders, Women must not be pregnant, Patients must not have fear of surgery, Patient must not have used acetaminophen, phenastin, naproxen, or ibuprofen Exclusion criteria: people with mental retardation, children, patients that have used analgesics. 80 patients aged 12 to 70 were randomly chosen and divided into two groups: the control and the study group. The indication for performing the periodontal surgery in the maxilla is the same in both groups. Both have been matched for interfering factors like sex and age. The experimental group are pretreated with ice packs on the injection site for 2 minutes, whereas the control group is not pretreated with ice. After the surgery, the patient's pain is assessed using the Visual analog scale analysis in which the patient reports his or her pain by themselves. This scale is graded from 0 to 5, where 0 means no pain and 5 means severe pain.

Scientific title

Evaluation of ice therapy as a pretreatment on reduction of injection pain and bleeding during periodontal surgery of maxilla after administration of prilocaine as a local anesthesia.

Public title

Evaluation of ice therapy as a pretreatment on reduction of injection pain and bleeding during periodontal surgery of maxilla after administration of prilocaine as a local anesthesia.

Purpose

Treatment

Inclusion/Exclusion criteria
inclusion criteria:no history of systemic diseases
especially hemorrhagic disorders.women must not be
pregnant.patients must not have fear of surgery.patient
must not have used acetaminophen with
phenastin,naproxen,ibuprofen, Exclusion criteria:people
with mental retardation, children,patient that have used
analgesics.

Age
From **12 years** old to **70 years** old

Gender
Both

Phase
