EFFECTS OF PHONOPHORESIS WITH AND WITHOUT DICLOFENAC DIETHYLAMINE WITH ROUTINE PHYSICAL THERAPY ON PAIN AND RANGE OF MOTION IN PATIENTS WITH CERVICAL SPONDYLOSIS

Protocol summary

Study aim

The main aim of the study is to compare the effects of phonophoresis with and without diclofenac diethylamine phonophoresis with routine physical therapy in patients who are diagnosed with cervical spondylosis.

Design

It will be single blinded study, in which the assessor will be unaware of the treatment group.

Settings and conduct

The data will be collected from the University of Lahore Teaching Hospital. The study population will be consisted of patients with cervical spondylosis.

Participants/Inclusion and exclusion criteria

Inclusion Criteria: • Patients with cervical spondylosis. • Aged from 30 to 60 years of patient with cervical spondylosis. • Pre-diagnosed cases of cervical spondylosis. • Both the genders. • Patients referred by orthopedic surgeons. • Patients who are willing to participate in this study. • Patients who are diagnosed with cervical spondylosis by other professionals/doctors. Exclusion Criteria: • Patients with cervical fracture. • Patients with vertebrobasilar insufficiency. • Presence of other significant rheumatic disease variants. • Patients who have history of any cervical spine surgery. • Patients who have active infection. • Pregnant Females. • Ankylosing Spondylitis.

Intervention groups

Intervention Group A: Diclofenac diethylamine phonophoresis will be done on the participants along with routine physical therapy to check the effectiveness of diclofenac diethylamine phonophoresis and how it influence the range of motion, pain and quality of life. Group B: Phonophoresis with only aqua gel and routine physical therapy will be provided to the patients.

Main outcome variables

Visual Analogue Scale and Neck Disability Index for Pain and Cervical Disability respectively and Universal

goniometer will be used for Range of motion and Short Form -36 for Quality of Life.

Target sample size: **72**

Randomization (investigator's opinion)

Randomized

Randomization description

Simple randomization will be used by one of the research team members who will be blinded and not involve in patient recruitment or assessment or data analysis. Participants are randomly allocated into two groups through drawing a number.

Blinding (investigator's opinion)

Single blinded

Blinding description

This study is a single blinded study in which outcome assessor will be unaware of the treatment group.

Title and more details about the data/document

Demographic data and data related to final outcome will be shared by maintaining the confidentiality.

When the data will become available and for how long

Data will be available after the publication of findings till six months

To whom data/document is available

Sara Khatoon

Under which criteria data/document could be used

For research purpose

From where data/document is obtainable

To the corresponding author of the study, Sara Khatoon and can contact on +923334104427, sarakhatoon4.sk@gmail.com

What processes are involved for a request to access data/document

Open access and there is the traditional public data release where anyone can get access to the data.
