

Clinical Trial Protocol

Iranian Registry of Clinical Trials

10 Jun 2026

The effect of atorvastatin on the level of high sensitive C reactive protein and right ventricular function in chronic obstructive pulmonary disease patients

Protocol summary

Summary

objective: The effect of atorvastatin on the level of inflammatory marker and right ventricular function in chronic obstructive pulmonary disease patients
design: study groups: chronic obstructive pulmonary disease patients; third phase, sample size: 50; blinding: double blind; randomization: randomized; single center.
Setting and conduct: for evaluating the right ventricle we used longitudinal systolic strain / strain rate echocardiography. Participants including major eligibility criteria: having stable chronic obstructive pulmonary disease for at least 3 month. Intervention: giving 40 milligram atorvastatin to 25 patients and placebo to other group main outcome measures (primary and secondary outcome variables): right ventricular size; pulmonary artery pressure; level of high sensitive C reactive protein

General information

Scientific title

The effect of atorvastatin on the level of high sensitive C reactive protein and right ventricular function in chronic obstructive pulmonary disease patients

Public title

The effect of atorvastatin on the level of inflammatory marker and right ventricular function in chronic obstructive pulmonary disease patients

Purpose

Treatment

Inclusion/Exclusion criteria

inclusion criteria: having stable chronic obstructive pulmonary disease for at least 3 month
exclusion criteria: having coronary artery disease, using medication for reducing lipid profile; having atrial fibrillation rhythm; having active liver disease; having

active infection; having malignancy; having connective tissue diseases

Age

No age limit

Gender

Both

Phase

N/A

Groups that have been masked

No information

Sample size

Target sample size: 50

Randomization (investigator's opinion)

Randomized

Health conditions studied

1

Description of health condition studied

chronic obstructive pulmonary disease

ICD-10 code

ICD-10-CM

ICD-10 code description

بیماری انسدادی مزمن ریه، غیرمشخص قابل تعمیم به بیماری انسدادی مزمن راه هوایی غیراختصاصی یا بیماری انسدادی مزمن ریه غیراختصاصی

Primary outcomes

1

Description

right ventricle systolic function

Timepoint

3 months after intervention

Method of measurement

tissue duppler and speckle tracking echocardiography

Secondary outcomes

1

Description

High sensitive C reactive protein

Timepoint

3 months after intervention

Method of measurement

blood sample

Intervention groups

1

Description

atorvastatin abidi company, 40 milligram, once a day, 3 month

Category

Treatment - Drugs

2

Description

placebo abidi company, 40 milligram, once a day, 3 month

Category

Treatment - Drugs
